Managing Organizations for Sport and Physical Activity, fourth edition, presents a clear and concise treatment of managing organizations in sport and physical activity. The four functions of management--planning, organizing, leading, and evaluating--provide a general framework that represents the simplest and best approach for introducing readers to the intricacies of management. For each management function, Chelladurai presents relevant theories and their practical applications, citing those theoretical models that are most appropriate to the unique aspects of the sports industry. He uses the open systems perspective, placing organizations in the context of their environment and emphasizing the manager's role in adapting and reacting to changes in that environment. To apply theory to sport management practices, Chelladurai provides numerous examples from the fields of physical activity and sport, including professional sports, intercollegiate athletics, health and sports clubs, and recreation/fitness programs. New to the Fourth Edition A chapter on service quality, which describes the notion of quality in sport management services--from the local fitness center to the pro sport arena. New sidebars on current topics relevant to the field of sport management; some examples include US Track and Field's SMART goal setting as well as genes and technology of leadership. Pedagogical Aids Developing Your Perspective. Thought-provoking questions ask learners to apply theoretical information to contexts relevant to them from their current experiences or in their future careers. Managing Your Learning. School-aged children in the U.S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that--along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time, communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental con-

texts represented by extracurricular activities, and after-school and community programs. Organized Activities as Contexts of Development provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study--psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.

The Pulitzer Prize-winning tragedy of a salesman's deferred American dream Ever since it was first performed in 1949, *Death of a Salesman* has been recognized as a milestone of the American theater. In the person of Willy Loman, the aging, failing salesman who makes his living riding on a smile and a shoeshine, Arthur Miller redefined the tragic hero as a man whose dreams are at once insupportably vast and dangerously insubstantial. He has given us a figure whose name has become a symbol for a kind of majestic grandiosity—and a play that compresses epic extremes of humor and anguish, promise and loss, between the four walls of an American living room. "By common consent, this is one of the finest dramas in the whole range of the American theater." —Brooks Atkinson, *The New York Times* "So simple, central, and terrible that the run of playwrights would neither care nor dare to attempt it." —*Time*

The wealth of information provided in this unique text will enable orthopedic surgeons, medical practitioners, physical therapists, and trainers to ensure that athletes who suffer anterior cruciate ligament (ACL) injuries, or who require major knee operations for other reasons, have the best possible chance of safely resuming sporting activity at their desired level without subsequent problems. Divided into seven thematic sections, the coverage is wide-ranging and encompasses common barriers to return to sport, return to sport decision-based models, and the complete spectrum of optimal treatment for ACL injuries, including preoperative and postoperative rehabilitation. Advanced training concepts are explained in detail, with description of sports-specific programs for soccer, basketball, and tennis. Readers will find detailed guidance on objective testing for muscle strength, neuromuscular function, neurocognitive function, and cardiovascular fitness, as well as validated assessments to identify and manage psychological issues. Being the parent of a young athlete is a complex and challenging endeavour. Parents play a pivotal role in the development of young people in reaching their full potential in sport - indeed, the psychological and practical support of parents can be as vital to young athletes as the appropriate coaching and facilities. This book brings together current research into the impact of parent-

ing in youth sport and examines the relationships between athletes, coaches and parents, whilst also discussing topics such as parenting styles, behaviour at competition and talent development. This book not only outlines the theories of parenting in youth sport, but also utilises research and examples from several countries, including the UK, US, Canada, and Australia. It has a research-to-practice theme and includes numerous suggestions for research projects (and getting research published). *Parenting in Youth Sport* is an essential text for students, lecturers and practitioners with an interest in youth sport, sport psychology or sport development.

This book examines emblems (or emblematic gestures) from a pragmatic view, that is to say, as autonomous gestures that fulfill communicative functions, embody illocutionary values, and act as signals of cognitive relevance. Emblems are conceived as multimodal tools on the frontier between verbal and nonverbal modes, and are part of the communicative repertoire of individuals and sociocultural groups. Emblems constitute clear cases of embodiment and are susceptible to many processes of metaphorization (contrasting or not with verbal metaphors), metonymy, and interference between modalities. The applications of emblematic analysis are numerous, from lexicography to second language learning, or to natural language processing.

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symp-

toms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

As clinical interest in overhead athletic injuries is on the upswing, so is greater interest in the factors for performance and injury risk in throwing and other overhead motion. This practical, case-based text is divided into two sections and will present the basic principles of overhead athletes followed by unique clinical case presentations describing different aspects of performance, injury and management in throwing and other overhead athletes.
