An individual cannot be replaced by a clone, a robot, or other intelligent automaton. As a human resource contributing to national output, the multi-dimensional nature of the contributions is not evident in the accounting estimates. Value Added / 14 National Labor Forces examines the interactions of persons as workers within their national boundaries. The amount and quality of their performance depends on both personal factors-such as health and wage income-and social aspects-such as labor market conditions and available retirement plans. The complex logistics of production within and across nations emphasizes the prominence of external circumstances in decision-making. Multinational corporations, off shoring, new consumer markets, natural resources, food supply, sanitation facilities, internet communications, and growth possibilities are among the tactical strategies to be resolved. In the end, the sum of value added of the individuals at work in each nation is inevitably linked to the global and national government context in which the actual production and financial decisions take place.

Edited in collaboration with FoLLI, the Association of Logic, Language and Information, this book constitutes the refereed proceedings of the 4th Indian Conference on Logic and Its Applications, ICLA 2011, held in Delhi, India, in January 2011. The 14 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 34 submissions. The papers present current research in all aspects of formal logic ranging from pure and applied logic to history of logic.

This revised set of resources for Cambridge International AS and A Level Business syllabus (9609) is thoroughly updated for the latest version of the curriculum. This article presents estimates of six dimensions of governance for 199 countries and territories for 1996, 1998, 2000, and 2002 developed in the context of an ongoing project to measure governance across countries. Section one describes the data used in developing this round of the governance indicators, which include several new sources. Data sources used in the earlier studies were updated forward to 2002 and backward to 1996, and previously estimated indicators for 1998 and 2000 were revised to reflect the new data. The aggregation procedure, described in section two, provides

not only estimates of governance for each country but also measures of the precision or reliability of these estimates. Although the new data have improved the precision of the governance indicators, the margins of error remain large relative to the units in which governance is measured, so that comparisons across countries and especially over time should be made with caution.

Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.

Technology has long been a helpful aid in human cognitive activities. With its growing sophistication and usage, technology is now taking a more intrinsic and active role in human cognition. The shift from an external aid to being an internal component of cognitive processing reflects a revolution in technology, cognition, and their interaction. The creation of such 'cognitive technologies' transforms the traditional instrumental function of technology to a constitutive role that shapes and defines cognition itself. This book, which was originally published as a Special Issue of Pragmatics & Cognition 13:3 (2005), explores the new horizon of these 'cognitive technologies' and their interactions with humans.

Policy-makers in Southern Africa are increasingly convinced that regional trade liberalization can improve growth performance and stimulate development throughout the region. To succeed where previous attempts have failed, however, governments must address two key issues. The first of these is policy coordination - the broad range of domestic policies must be made compatible with the proposed trade reforms. The second is institution building - concerted attention must be devoted to strengthening weak institutions and infrastructure. The contributors are among the leading authorities on regional integration in Africa.

These New editions of the successful, highly-illustrated study/revision guides have been fully updated to meet the latest specification changes. Written by experienced examiners, they contain in-depth coverage of the key information plus hints, tips and guidance about how to achieve top grades in the A2 exams.

Smart Moves takes a distinctive look at essential issues faced by today's business managers. Avoiding jargon and mystique, it provides straightfor-

ward opinions and practical advice on how managers can handle everyday business and career challenges.

In recent years, analysts, researchers and environmental policy makers have been faced with a serious shortage of empirical data on environmental phenomena. In fact, the information gathered by various organisations has not yet been systematically classified into a consistent system of accounts. This book presents the results of a joint research effort by the Fondazione Eni Enrico Mattei and Italy's Central Statistical Office (ISTAT) to design a system of accounts for natural and environmental resources. The resulting environmental accounts can be integrated with the existing system of national accounts, in order to estimate the so-called 'green GDP' or 'net national product' (NNP).

These proceedings contain research papers that were accepted for presentation at the 14th International Conference Inter-Eng 2020, Interdisciplinarity in Engineering, which was held on 8–9 October 2020, in Târgu Mureş, Romania. It is a leading international professional and scientific forum for engineers and scientists to present research works, contributions, and recent developments, as well as current practices in engineering, which is falling into a tradition of important scientific events occurring at Faculty of Engineering and Information Technology in the George Emil Palade University of Medicine, Pharmacy Science, and Technology of Târgu Mureş, Romania. The Inter-Eng conference started from the observation that in the 21st century, the era of high technology, without new approaches in research, we cannot speak of a harmonious society. The theme of the conference, proposing a new approach related to Industry 4.0, was the development of a new generation of smart factories based on the manufacturing and assembly process digitalization, related to advanced manufacturing technology, lean manufacturing, sustainable manufacturing, additive manufacturing, and manufacturing tools and equipment. The conference slogan was "Europe's future is digital: a broad vision of the Industry 4.0 concept beyond direct manufacturing in the company".

This two-volume set LNCS 4805/4806 constitutes the refereed proceedings of 10 international workshops and papers of the OTM Academy Doctoral Consortium held as part of OTM 2007 in Vilamoura, Portugal, in November 2007. The 126 revised full papers presented were carefully reviewed and selected from a total of 241 submissions to the workshops. The first volume begins with 23 additional revised short or poster papers of the OTM 2007 main conferences.

Good requirements do not come from a tool, or from a customer interview. They come from a repeatable set of processes that take a project from the early idea stage through to the creation of an agreed-upon project and product scope between the customer and the developer. From enterprise analysis and planning requirements gathering to documentation,

This report reviews recent developments in the application of behavioural insights to encourage more sustainable consumption, investment and compliance decisions by individuals and firms.

As we enter the last decades of the twentieth century, many persistent and perplexing problems continue to afflict humankind. Thus it is appropriate to address, in a new group of books, two of the monumental issues that haunt people throughout the world. *Soils and the Environment* by Professor Gerald W. Olson is the first book in this new publishing program on Environment, Energy, and Society. The purpose of all these books will be to explore the many interrelated facets of these topics and to provide guidance for dealing with problems and offering ideas for their solutions. Environment and energy are twin problems that occupy what many believe to be opposite sides of a two-headed coin. They are often viewed as being antithetical and incompatible. The various books in this program will try to place in perspective the options that are available to those who design policy and plan and manage societal matters. Typical of books being developed currently are ones on coal resources, environmental geoscience, environ-

mental pollution, land-use planning, nuclear energy, mineral resources, and water resources. However, because soils are at the very heart of civilization and provide the building block for human sustenance, it is fitting to inaugurate this series with Dr. Olson's timely analysis of soils. Unfortunately, these most vital resources seem to have low priority in many farming enterprises, urbanization projects, deforestation schemes, and mining and developmental terrain changes.

A comprehensive source of information on four key issues: the definition of investor and investment; the interpretation of umbrella clauses in investment agreements; coverage of environmental, labour and anti-corruption issues; and the interaction between investment and services chapters in RTAs.

This book deals with the cellular biology, biochemistry and physiology of photoreceptors and their interactions with the second-order neurons, bipolar and horizontal cells. The focus is upon the contributions made by these neurons to vision. Thus the basic neurobiology of the outer retina is related to the visual process, and visual defects that could arise from abnormalities in this part of the retina are highlighted in the first 16 chapters. Since all vertebrate retinas have the same basic structure and physiological plan, examples are given from a variety of species, with an emphasis upon mammals, extending to human vision. The last four chapters approach the problem from the other end. This part of the book covers a range of clinical conditions involving visual abnormalities that are due to cellular defects in the outer retina. Although the contents of this book do not represent the proceedings of a conference, the concept arose at an international symposium on 'Recent Advances in Retinal Research' which was held at the International Marine Centre in Oristano, Sardinia. We hope that the book will give a coherent, up to date review of the neurobiology and clinical aspects of the outer retina and encourage further integration of these areas. Retinal neurobiology has been an intense field of investigation for several decades. More recently, it has seen significant advances with the application of modern techniques of cell and molecular biology.

Cities in Transition focuses on the sustainability transitions initiated in 40 European cities. The book presents the incredible wealth of insights gathered through hundreds of interviews and questionnaires. Four key domains—local energy systems, local green spaces, local water systems and local labour markets—have been the focus of the field research investigating local potentials for social innovation and new forms of civil society self-organisation. Examining the potential of new organizational frameworks like co-operatives, multi-stakeholder constructions, local-regional partnerships and networks for the success of such transitions, this book presents the key ingredients of a sustainable urban community as a viable concept to address current global financial, environmental and social challenges. Crucial reading for academics and practitioners of urban planning and sustainability in Europe, *Cities in Transition* is an innovative roadmap for sustainability in changing cities.

This revised set of resources for Cambridge International AS and A Level Business syllabus (9609) is thoroughly updated for the latest version of the curriculum. This book addresses six key factors that will affect environmental policies in the Mediterranean region during the next fifty years: population growth, climate change, soil erosion and desertification, water scarcity, food production, and urbanization and pollution. The authors assess these as potential sources of violent conflict. The interdisciplinary approach makes this a relevant and useful reference for a broad range of professionals, specialists and researchers.

With new cases and examples from headlines, *MANAGERS AND THE LEGAL ENVIRONMENT: STRATEGIES FOR BUSINESS*, 9E equips readers with the legal knowledge and risk management techniques for success as a business manager. Cutting-edge coverage and a strategic approach teach how to enhance realizable value, redeploy resources, and manage legal and business risk. Up-to-date coverage addresses the rights of workers at firms, like Uber, in the gig economy; the right of employers to restrict employees' social media; ethics of compensating workers who are tipped; law to protect children's safety on the Internet; Fourth Amendment concerns in searches of cell location; rules governing crowdfunding; and the ramifications of the EU's "right to be forgotten." Readers learn to use legal tools to create value, attain business objectives, resolve legal issues, and handle legal disputes.
