Fully illustrated throughout with a wide range of scans, images and line drawings, ABC of Orthopaedics and Trauma provides practical guidance on the diagnosis, treatment and management of orthopaedic conditions, and assists with the initial assessment based on common presentations. Written by a team of renowned expert orthopaedic surgeons and rheumatologists, it includes coverage of the current national guidelines from NICE and professional bodies. Twenty-four chapters cover all the major areas of this vast speciality using a digestible and reader-friendly approach, including sections on fractures, joint replacements, rheumatological disorders, osteoarthritis, emergencies, and post-operative care. Introduction to specialist topics like metabolic bone disease, peripheral nerve injury, paediatric orthopaedics and tumours are also featured. Topics consist of history and examination, investigation and initial management of common orthopaedic trauma and elective presentations. In addition, this full-colour, user-friendly reference guide offers readers a look at the day-to-day clinical practice of a speciality that will affect at least half of the global population at some point, covering further chapters on epidemiology, biomechanics, common procedures, future developments and education. ABC of Orthopaedics and Trauma is an excellent resource for all healthcare professionals caring for patients with musculoskeletal and orthopaedic related disorders. This will be a valuable reference to orthopaedic trainees, sports physicians, physiotherapists, nurses, occupational therapists, clinical researchers and student doctors.

The Trauma Care Manual was first published in 2000, and was the first evidence-based manual of best trauma practice. Now in its second edition, it continues to offer clear and practical guidelines for the management of victims of major trauma, reflecting current

practice in the United Kingdom and Europe. The second edition benefits from an increase

The Golden Hour is a well-established concept in emergency medicine, related to the critical period of one hour after an injury, accident or trauma. This term implies that the mortality rates increase substantially if efficient care is not provided within 60 minutes after the trauma. This book is intended as a practical manual in Trauma Care within the context of the golden hour, addressing all trauma types and all body parts. Readers will find essential decision-making algorithms and protocols with commentary for traumas, along with easily accessible information on how to treat patients in a very practical and handy fashion. Furthermore, the content is presented in a didactic way suitable for a wide audience, from medical students who want to learn about the basics of trauma care to experienced surgeons seeking a comprehensive guide to trauma-related interventions. The book combines contributions from experts at two renowned Trauma Centers, the Hospital do Trabalhador at Curitiba, Brazil, and the Ryder Trauma Center in Miami, USA. Therefore, considering the different local environments and resources, the book provides distinct perspectives for several injuries, presenting the state of the art in Trauma Care. The diversity of perspectives in this book contributes to a global health care approach suitable for trauma-related events from developed countries to remote areas. The Trauma Golden Hour - A Practical Guide celebrates the Centennial Anniversary of the Federal University of Parana (Brazil), the 25th Anniversary of the Ryder Trauma Center (USA) and the 20th Anniversary of the Hospital do Trabalhador (Brazil).

Traumatic events known as adverse childhood experiences (ACEs) can affect children physically, mentally, and emotionally, sometimes with long-term health and behavioral effects. Abuse, neglect, exposure to community and domestic violence, and house-

hold dysfunction all have the potential to alter brain development and behavior, but few people are able to recognize or respond to trauma in children. Given the prevalence of childhood exposure to violence—with one in four children ages 5 to 15 living in households with only moderate levels of safety and nurturance and infants and children ages 0 to 3 comprising the highest percentage of those maltreated—it is imperative that students and professionals alike be able to identify types and consequences of violence and trauma. This book provides readers with the information they need in order to know how to detect and prevent ACEs and to help children who have lived through them.

This publication seeks to provide a global overview of the nature and extent of injury mortality and morbidity in the form of user-friendly tables and charts. It is hoped that the graphical representation of the main patterns of the burden of disease due to injury will raise awareness of the importance of injuries as a public health issue and facilitate the implementation of effective prevention programs.

This book provides a practical guide to decision making within the realm of trauma surgery. Each chapter covers the ideal approach, rather than customary care, for the treatment of the chosen difficult decision or controversy. A broad range of topics are covered with particular attention given to resuscitation, wound management, thoracic and abdominal trauma, antimicrobial management, transplant considerations, vascular trauma, traumatic brain injury, pediatric trauma and ethics. Difficult Decisions in Trauma Surgery aims to help improve the treatment of trauma patients and is relevant to surgical trainees and practicing surgeons, and as well as medical professionals working within trauma medicine. An authoritative overview of the management and treatment of major trauma patients In the newly revised, and substantially expanded, Fifth Edition of ABC of Major Trauma, an eminent team of

leading trauma specialists delivers a comprehensive, up-to-date, referenced overview of the emergency treatment of patients suffering from major trauma. Covering all aspects of the management of injured patients during the initial, crucial hours after injury, the scope of the book has developed to include imaging appendices for many chapters. The editors have included resources that discuss general considerations for typical trauma cases, as well as the numerous atypical patients including children, the elderly and those who are pregnant. Hyperlinks are now also included throughout the book which enable the reader to refer to continuously updated guidelines. The book also offers: A thorough introduction to the development and organisation of trauma services, including pre-hospital care and major incidents. A guide to the modern trauma team personnel from airway doctor, to trauma nurse, to trauma team leader, while describing the technical and non-technical skills required for the ABCDE of trauma resuscitation, imaging and the subsequent transfer of the patient. Specialist chapters on ballistic trauma, chemical contamination and burns as well as the management of trauma in specialist patient groups including paediatrics, pregnancy, and the elderly. A new and vital chapter on rehabilitation as well an expansion of the measurement of trauma outcomes to include disability and a discussion on how such audits can drive further improvement. Perfect for all those involved in the care of the trauma patient, including nurses, physician associates, hospital doctors, paramedics and pre-hospital teams, the ABC of Major Trauma is a one-stop referenced guide to the care of such patients from the site of injury to maximal recovery. About the ABC series The ABC series has been designed to help you access information quickly and deliver the best patient care, and remains an essential reference tool for GPs, junior doctors, medical students and healthcare professionals. Now offering over 80 titles, this extensive series provides you with a quick and dependable reference on a range of topics in all the major specialties. In this groundbreaking book, a leading clinical psychiatrist redefines how we think about and treat victims of trauma. A "stunning achievement" that remains a "classic for our generation." (Bes-

sel van der Kolk, M.D., author of *The Body Keeps the Score*). Trauma and Recovery is revered as the seminal text on understanding trauma survivors. By placing individual experience in a broader political frame, Harvard psychiatrist Judith Herman argues that psychological trauma is inseparable from its social and political context. Drawing on her own research on incest, as well as a vast literature on combat veterans and victims of political terror, she shows surprising parallels between private horrors like child abuse and public horrors like war. Hailed by the *New York Times* as "one of the most important psychiatry works to be published since Freud," Trauma and Recovery is essential reading for anyone who seeks to understand how we heal and are healed.

This book provides a systemic approach to acute trauma care in line with the ABCDE paradigm and up-to-date information on assessing and managing major trauma from the pre-hospital to the rehabilitation phase. The book's early sections are dedicated to identifying and managing pathology caused by massive haemorrhage, airway, breathing, circulation or neurological trauma and examining the current evidence base relating to their management. The book then builds from fundamental skills to advanced interventions so that each level of responder can identify and implement aspects of clinical practice that will be of benefit to them at their stage. This approach also explains advanced interventions that may be executed subsequently, explaining how each phase of care sits together. This has a further benefit of producing seamless care for patients by practitioners of different levels using this book as a reference point. Later sections deal with specifics of in-hospital trauma care by specialty, including the explanation of decision making processes by specialties, use of diagnostic and interventional radiology, rehabilitation and psychological aspects of trauma care. The Textbook of Acute Trauma Care also focuses on non-clinical issues relevant to trauma such as training and logistics of retrieval and repatriation, aviation considerations in HEMS, legal and forensic evidence considerations and ethical issues dealing with trauma patients. In addition, the book contains chapters from international experts on cognitive and human factors relating to healthcare and suggests strategies for training and minimising errors. This book is an essential resource for all grades of practitioner, from first responders to Consultant/Attending Physician level providers.

Trauma patients present a unique challenge to anesthesiologists,

since they require resource-intensive care, often complicated by pre-existing medical conditions. This fully revised new edition focuses on a broad spectrum of traumatic injuries and the procedures anesthesiologists perform to care for trauma patients peri-operatively, surgically, and post-operatively. Special emphasis is given to assessment and treatment of co-existing disease, including surgical management of trauma patients with head, spine, orthopaedic, cardiac, and burn injuries. Topics such as training for trauma (including use of simulation) and hypothermia in trauma are also covered. Six brand new chapters address pre-hospital and ED trauma management, imaging in trauma, surgical issues in head trauma and in abdominal trauma, anesthesia for oral and maxillofacial trauma, and prevention of injuries. The text is enhanced with numerous tables and 300 illustrations showcasing techniques of airway management, shock resuscitation, echocardiography and use of ultrasound for the performance of regional anesthesia in trauma.

Text covers all the main areas of trauma care necessary for the trauma specialist in the 21st century.

The number of natural and man-made disasters has risen dramatically over the last decade. Natural disasters, industrial accidents and terrorist attacks represent major incidents, often involving multiple casualties. In such cases, health professionals face multiple challenges because the type of medical care required differs from what is taught and provided in their everyday hospital duties. The aim of this book is to inform and prepare healthcare professionals for the challenges posed by major incidents, so that they can act effectively in medical teams sent on humanitarian missions or into conflict zones. It offers a holistic and horizontal approach covering all stages of the disaster management cycle. The book is divided into 5 sections: section 1: prehospital emergency services; section ii: hospital response; section iii: management of incidents; section iv: after the disaster; and section v: evaluation, ethical issues, education and research. Healthcare providers will find essential information on the special medical considerations in both prehospital and hospital disaster settings, medical management of disaster response, recovery, mitigation and preparedness. The book offers an interdisciplinary and inter-professional approach, and was written by prominent researchers and experienced practitioners.

Essential Emergency Trauma is a concise, reader-friendly, and

portable reference on the care of trauma patients in the emergency department. Geared to practicing emergency physicians, residents, and medical students. Major sections cover trauma of each anatomic region. Each section opens with a chapter "The First 15 Minutes, Algorithm, and Decision Making." Subsequent chapters focus on specific injury patterns, emphasizing pathophysiology, diagnosis, evaluation, and management. The information is presented in bullet points with numerous tables and images. Each chapter ends with an up-to-date review of the "Best Evidence."

This book is aimed at surgeons faced with the immediate management of acute surgical problems in a variety of resource settings. The topics covered are common in both developed and developing countries as well as in tropical and non-tropical settings. The book offers an introduction to trauma, which includes primary, secondary and tertiary surveys, trauma resuscitation, and multidisciplinary care followed by a short section on acute burns management and a discussion of a range of specific surgical topics including various of acute abdomen, upper and lower gastrointestinal bleeding, perianal conditions, oncological issues that require acute intervention, abdominal wall problems, urological emergencies and neck swellings. It also addresses the rational use of antibiotics and medications and the role of high dependency units. Each chapter includes a flow chart algorithm with multiple endpoints that relate to the resource situations available to the surgeon. The book is of interest to clinicians dealing with changes in acute surgery and the increasing disparity between developed and developing countries

This encyclopedia is an authoritative compilation of practical information on major topics in trauma management. Its encyclopedic format will allow the reader to rapidly find up-to-date information on a specific topic of interest. The book is organized in an organ-based manner for ease of use when a practitioner is confronted with a particular injury. Each chapter takes the form of a clearly structured review of the subject in question and includes informative illustrations and tables as well as lists of classic references. In addition to the full range of organ-specific injuries, a number of important further topics are covered, including critical care of the trauma patient, trauma system organization, mass injury scenarios, the impact of new technologies, complications in trauma care, and ethical issues. All of the authors are leading experts, and the encyclopedia will provide an excellent source of in-

formation for both basic and clinical scientists and trainees in various fields.

The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Management.

The second edition of Emergency and Trauma Care for Nurses and Paramedics provides the most up-to-date and comprehensive coverage of clinical procedures and issues encountered in contemporary emergency care in Australia and New Zealand. Written by leading academics and clinicians, this fully revised and updated edition follows the patient's journey from pre-hospital retrieval to definitive care. With a strong focus on multidisciplinary care, this evidence-based emergency and trauma resource will appeal to pre-hospital care providers, rural, remote and urban emergency nurses and allied health professionals, as well as disaster management and interfacility transport staff. Essential concepts are covered in a logical order, commencing with: An introduction to emergency professions and professional issues Clinical and health systems Patient presentations ordered by body system as well as toxicology, envenomation, ocular, environmental emergencies and unique population groups Major trauma assessment and management and end-of-life care information and considerations. Emergency and Trauma Care for Nurses and Paramedics 2e continues to be the pre-eminent resource for students preparing to enter the emergency environment and for clinicians seeking a greater understanding of multidisciplinary care from retrieval through to rehabilitation. A cultural safety approach is included throughout - addressing cultural diversity, beliefs and values and focusing on Aboriginal and Torres Strait Islander health and Māori health Essentials outline the main points addressed in each chapter Practice tips throughout assist with communication skills, procedures and assessment Case studies are supported by questions and answers to encourage active learning New online resources available on Evolve, including over 30 new case studies with

paramedic-specific questions. Highlighted skills - cross references to the Clinical Skills chapter throughout text Over 30 new case studies Patient journey from pre-hospital and emergency-specific case studies Critical thinking questions at the end of chapters Chapter 35 Obstetric emergencies now includes 'Supporting a normal birth'.

This beloved bestseller—over 180,000 copies sold—has helped caregivers worldwide keep themselves emotionally, psychologically, spiritually, and physically healthy in the face of the sometimes overwhelming traumas they confront every day. A longtime trauma worker, Laura van Dernoot Lipsky offers a deep and empathetic survey of the often-unrecognized toll taken on those working to make the world a better place. We may feel tired, cynical, or numb or like we can never do enough. These, and other symptoms, affect us individually and collectively, sapping the energy and effectiveness we so desperately need if we are to benefit humankind, other living things, and the planet itself. In Trauma Stewardship, we are called to meet these challenges in an intentional way. Lipsky offers a variety of simple and profound practices, drawn from modern psychology and a range of spiritual traditions, that enable us to look carefully at our reactions and motivations and discover new sources of energy and renewal. She includes interviews with successful trauma stewards from different walks of life and even uses New Yorker cartoons to illustrate her points. "We can do meaningful work in a way that works for us and for those we serve," Lipsky writes. "Taking care of ourselves while taking care of others allows us to contribute to our societies with such impact that we will leave a legacy informed by our deepest wisdom and greatest gifts instead of burdened by our struggles and despair."

Here's a unified evidence-based approach to problems encountered in trauma and critical care surgical situations. Comprehensive and concise, it is ideal for a quick overview before entering the operating room or ICU, or as a review for board certification or recertification. Be prepared for the unexpected with practical, concise coverage of major surgical problems in trauma and critical care. Get expert practical and up-to-date guidance on ventilator management, damage control, noninvasive techniques, imaging, infection control, dealing with mass casualties, treating injuries induced by chemical and biological agents, and much more. Find the information you need quickly and easily through numerous il-

illustrations, key points boxes, algorithms, and tables.

Trauma: A Comprehensive Emergency Medicine Approach is a fully illustrated, interdisciplinary overview of trauma. Using both evidence-based approaches and a practical understanding of the emergency department, it gives a broad and in-depth review of trauma care. The entire spectrum of trauma presentations is reviewed from minor soft-tissue injuries through to major life-threatening conditions. Written by over 50 expert contributors, it gives concrete and practical recommendations for evaluation, treatment, consultation and disposition decisions on both common and unusual conditions. Extensive use of photographs, illustrations and key information boxes is used to make the material accessible. Additional sections provide an overview of multiple other issues relating to emergency management of trauma including administrative, nursing, research and legal matters. This book provides an essential reference for anyone who is called upon to provide acute trauma care in the emergency department.

This international bestseller covers the full advanced paediatric life support course, with the core sections for the abbreviated one-day course clearly picked out. The book provides practical guidance for managing children and infants in the first life-threatening "golden" hour. This new edition goes beyond immediate management to include stabilisation and transfer.

Prehospital Emergency Medicine (PHEM) is a new and evolving field within Prehospital Care and involves the delivery of safe pre-hospital critical care to seriously ill or injured patients, and safe transfer to or between hospitals. It covers a broad range of medical and traumatic conditions, interventions, clinical providers and physical environments. ABC of Prehospital Emergency Medicine is the first text to provide a comprehensive overview of this field and with an international team of expert authors is essential reading to anyone involved in the delivery of Prehospital Emergency Medicine and Prehospital Care. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from iTunes, Google Play or the MedHand Store.

The first edition of this publication was aimed at defining the current concepts of trauma induced coagulopathy by critically analyzing the most up-to-date studies from a clinical and basic science perspective. It served as a reference source for any clinician interested in reviewing the pathophysiology, diagnosis, and management of the coagulopathic trauma patient, and the data that sup-

ports it. By meticulously describing the methodology of most traditional as well as state of the art coagulation assays the reader is provided with a full understanding of the tests that are used to study trauma induced coagulopathy. With the growing interest in understanding and managing coagulation in trauma, this second edition has been expanded to 46 chapters from its original 35 to incorporate the massive global efforts in understanding, diagnosing, and treating trauma induced coagulopathy. The evolving use of blood products as well as recently introduced hemostatic medications is reviewed in detail. The text provides therapeutic strategies to treat specific coagulation abnormalities following severe injury, which goes beyond the first edition that largely was based on describing the mechanisms causing coagulation abnormalities. Trauma Induced Coagulopathy 2nd Edition is a valuable reference to clinicians that are faced with specific clinical challenges when managing coagulopathy.

This book provides in-depth coverage of all aspects of pelvic ring fractures and their management. The opening chapters supply essential information on surgical anatomy, biomechanics, classification, clinical evaluation, radiological diagnostics, and emergency and acute management. The various operative techniques, including navigation techniques, that have been established and standardized over the past two decades are then presented in a step-by-step approach. Readers will find guidance on surgical indications, choice of approaches, reduction and fixation strategies, complication management, and optimization of long-term results. Specific treatment concepts are described for age-specific fractures, including pediatric and geriatric injuries, and secondary reconstructions. Pelvic ring fractures represent challenging injuries, especially when they present with concomitant hemodynamic instability. This book will help trauma and orthopaedic surgeons at all levels of experience to achieve the primary treatment aim of anatomic restoration of the bony pelvis to preserve biomechanical stability and avoid malunion with resulting clinical impairments.

In cities around the world, planning and health experts are beginning to understand the role of social and environmental conditions that lead to trauma. By respecting the lived experience of those who were most impacted by harms, some cities have developed innovative solutions for urban trauma. In Cities for Life, public health expert Jason Corburn shares lessons from three of these cities: Richmond, California; Medellín, Colombia; and Nairobi,

Kenya. Corburn draws from his work with citizens, activists, and decision-makers in these cities over a ten-year period, as individuals and communities worked to heal from trauma--including from gun violence, housing and food insecurity, poverty, and other harms. Cities for Life is about a new way forward with urban communities that rebuilds our social institutions, practices, and policies to be more focused on healing and health.

Trauma is a leading cause of death and disability around the world, and the leading cause of death in those aged under forty-five years. Conditions such as airway obstruction, hemorrhage, pneumothorax, tamponade, bowel rupture, vascular injury, and pelvic fracture can cause death if not appropriately diagnosed and managed. This essential book provides emergency physicians with an easy-to-use reference and source for traumatic injury evaluation and management in the Emergency Department. It covers approaches to common, life-threatening, and traumatic diseases in the Emergency Department, for use on shift and as a reference for further learning. Each chapter includes a succinct overview of common traumatic injuries, with evaluation and management pearls and pitfalls. Highly illustrated with images from one of the busiest trauma centers in the US, and featuring expert contributions from a diverse set of attending physicians, this is an essential text for all emergency medicine practitioners.

Injuries are the leading cause of death and disability among people under age 35 in the United States. Despite great strides in injury prevention over the decades, injuries result in 150,000 deaths, 2.6 million hospitalizations, and 36 million visits to the emergency room each year. Reducing the Burden of Injury describes the cost and magnitude of the injury problem in America and looks critically at the current response by the public and private sectors, including: Data and surveillance needs. Research priorities. Trauma care systems development. Infrastructure support, including training for injury professionals. Firearm safety. Coordination among federal agencies. The authors define the field of injury and establish boundaries for the field regarding intentional injuries. This book highlights the crosscutting nature of the injury field, identifies opportunities to leverage resources and expertise of the numerous parties involved, and discusses issues regarding leadership at the federal level.

'...provides an excellent introduction to the management of acute illness for all clinical staff, and a solid foundation for those who

choose to make ICM a fulfilling life-long career.' From the Foreword by Julian Bion, Professor of Intensive Care Medicine, University of Birmingham Ideal for any medic or health professional embarking upon an intensive care rotation or specialism, this simple bedside handbook provides handy, pragmatic guidance to the day-to-day fundamentals of working in an intensive care unit, often a daunting prospect for the junior doctor, nurse and allied health professional encountering this challenging environment for the first time. Thoroughly updated, the second edition addresses recent and future developments in a variety of areas and is now organised into easy-to-read sections with clearly outlined learning goals. New topics added include sepsis, ARDS, refractory hypoxia, the role of allied health professionals, post ICU syndrome and follow up, and consent and capacity including new DOLS guidance. The book is authored by world-renowned contributors and edited by established consultants in the field of intensive care medicine.

Manual of Definitive Surgical Trauma Care is an essential manual for all trainee and qualified surgeons. It covers every aspect of surgical trauma care. Provides clear access to all necessary information, from theory of injury through to individual organ system injury and resources such as injury scoring Provides clear surgical guidance on how to deal

Prehospital care is a growing area in medicine, and emergency treatments are becoming more sophisticated as the potential to save lives grow. The fourth edition of this ABC has been thoroughly updated and includes new chapters on nuclear and biological emergencies. Each chapter gives concise and clear guidance and is accompanied by excellent photographs and diagrams. Edited and written by leading UK trauma authorities, this is a truly comprehensive and practical book for everyday use by emergency medicine staff, nurses, hospital doctors, paramedics, and ambulance services. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from iTunes, Google Play or the MedHand Store.

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on

the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

An expert on traumatic stress outlines an approach to healing, explaining how traumatic stress affects brain processes and how to use innovative treatments to reactivate the mind's abilities to trust, engage others, and experience pleasure--

Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an up-to-date, comprehensive and clinically focused volume for practitioners and trainees in trauma anesthesia and critical care. It is organized by organ system. The editor is an attending physician at a major urban hospital center recognized worldwide for its outstanding emergency medical services including trauma care and is recruiting leading trauma anesthesiologists to contribute. Anesthesiologists, pain medicine physicians, critical care physicians and trainees are the target audience.

A great source of examples that can be referred to in the heat of emergency. Mistakes can easily be made when interpreting emergency radiographs. The situation is often made more difficult by the urgency and circumstances in which the radiograph has to be evaluated. This book describes a systematic approach to assessing radiographs, instructing you on the appearances of radiological abnormalities and comparing these with normal radiographs. Each chapter covers a different part of the body and leads you through the anatomy, followed by the different types of view to request, the system of assessment itself, and pitfalls to avoid. With its clear explanation, combined with over 400 radiographs and illustrations, this essential book provides a great source of examples that can be referred to in the heat of an emergency. It will be invaluable for accident and emergency staff, trainee radiologists, medical students, nurses, and radiographers.

An understanding of current trauma imaging concepts is essential for all medical personnel involved in the care of trauma patients where the outcome may depend on a rapid assessment of the nature and severity of injuries, allowing appropriate medical management and surgical or non-surgical intervention. Containing more than 300 state of the art full colour images, the ABC of Imaging in Trauma addresses this increasingly important area and provides a concise and practical guide to the role, performance and interpretation of emergency imaging procedures in disaster victims and major trauma patients, and focuses on the use of CT, ultrasound, and MRI scanning to diagnose such patients. It is ideal for the non specialist and emergency physicians, Foundation doctors, trainee radiologists, and specialist trauma nurses. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play or the MedHand Store.

Written by over 100 internationally known experts, Trauma, 4/e comprehensively covers all aspects of trauma and surgical critical care, including the integral phases: prehospital, emergency department, surgery and the operating room, intensive care, and rehabilitation. This edition retains its well-organized and easy-to-read format with practical advice regarding procedures and management strategies in modern day trauma care. Now features new chapter commentaries, written by the leading specialists.

ABC of Resuscitation is a practical, illustrated guide to the latest resuscitation advice for the non-specialist and provides the core knowledge on the treatment of cardiopulmonary arrest. This edition provides a guide to the European Resuscitation Council Guidelines for Resuscitation 2010 and the Resuscitation Council (UK) 2010 Resuscitation Guidelines. It Includes: the causes and prevention of cardiac arrest basic and advanced life support for adults, children and newborns resuscitation in a range of contexts (in-hospital and out-of-hospital, including drowning, pregnancy, sport and trauma) important aspects of implementation of guidelines including human factors and education ABC of Resuscitation, 6th Edition is ideal for all healthcare professionals including junior doctors, medical students, general practitioners, paramedics and nurses. It is also useful for pre-hospital care practitioners, emergency medicine trainees, resuscitation officers and all those who teach resuscitation. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play or

Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. *Manual of Definitive Surgical Trauma Care, Second Edition*, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written

by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: ·the causation of injuries - aids rapid understanding of presented trauma; ·the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; ·the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons.

The two-volume *Emergency Medical Services: Clinical Practice and Systems Oversight* delivers a thorough foundation upon which to succeed as an EMS medical director and prepare for the

NAEMSP National EMS Medical Directors Course and Practicum. Focusing on EMS in the 'real world', the book offers specific management tools that will be useful in the reader's own local EMS system and provides contextual understanding of how EMS functions within the broader emergency care system at a state, local, and national level. The two volumes offer the core knowledge trainees will need to successfully complete their training and begin their career as EMS physicians, regardless of the EMS systems in use in their areas. A companion website rounds out the book's offerings with audio and video clips of EMS best practice in action. Readers will also benefit from the inclusion of: A thorough introduction to the history of EMS An exploration of EMS airway management, including procedures and challenges, as well as how to manage ventilation, oxygenation, and breathing in patients, including cases of respiratory distress Practical discussions of medical problems, including the challenges posed by the undifferentiated patient, altered mental status, cardiac arrest and dysrhythmias, seizures, stroke, and allergic reactions An examination of EMS systems, structure, and leadership
