All the exercises plus their solutions for Serge Lang's fourth edition of "Complex Analysis," ISBN 0-387-98592-1. The problems in the first 8 chapters are suitable for an introductory course at undergraduate level and cover power series, Cauchy's theorem, Laurent series, singularities and meromorphic functions, the calculus of residues, conformal mappings, and harmonic functions.

1 Basic complex analysis We begin with an overview of basic facts about the complex plane and analytic functions. Some notation. The complex numbers will be denoted \mathbb{C} . We let \mathbb{H} and \mathbb{D} denote the unit disk $|z| < 1$, the upper half plane $\text{Im}(z) > 0$, and the

Riemann sphere $\mathbb{C} \cup \{\infty\}$. We write $S_1(r)$ for the circle $|z| = r$, and S_1 for
