Buy Phonetics, a Critical Analysis of Phonetic Theory and a Technic for the Practical Description of Sounds by Pike, Kenneth L. (ISBN:) from Amazon's Book Store. Everyday low prices and free delivery on eligible orders.

To see how features work, let's look at a couple of examples. We can describe the segment [b], for example, as being made up of this set of features. First, [b] is a consonant (meaning it has some obstruction in the vocal tract), so it gets the feature consonant indicated with a plus sign to show that the consonant feature is present. Looking at the next feature, sonorant, notice that it's indicated with a minus sign, meaning that [b] is not a sonorant. linguistics labial sounds are ones that you pronounce with your lips closed or close together or with your top teeth touching your bottom lip. 'p', 'b', 'f', 'v', and 'm' are labial sounds

Phonetics is a branch of linguistics that focuses on the production and classification of the world's speech sounds. The production of speech looks at the interaction of different vocal organs, for example the lips, tongue and teeth, to produce particular sounds. By classification of speech, we focus on the sorting of speech sounds into categories which can be seen in what is called the International Phonetic Alphabet (IPA).
