Chapter 18: Sampling Distribution Models. AP Statistics. Unit 5. The Central Limit Theorem for Sample Proportions. Rather than showing real repeated samples, imagine what would happen if we were to actually draw many samples. Now imagine what would happen if we looked at the sample proportions for these samples. Pull all your class information together in one place. Stay connected with parents and students. Includes a place to post a "word of the week," a blog to display a "student of the month," a central place for homework assignments, and an easy form for parents to contact you. Easily add class blogs, maps, and more!

Chapter 18: Sampling Distribution Models AP Statistics RNBriones Concord High 3 The parameter  $p$  is the population proportion. In practice, this value is always unknown. (If we know the population proportion, then there is no need for a sample.) The statistic  $\hat{x} \times p \times n$  is the sample proportion. We use  $\hat{p}$  to estimate the value of  $p$ .
