Thank you very much for downloading **Bsava Of Feline Practice A Foundation**. As you may know, people have search hundreds times for their favorite books like this Bsava Of Feline Practice A Foundation, but end up in malicious downloads. Rather than enjoying a good book with a cup of tea in the afternoon, instead they are facing with some harmful bugs inside their laptop.

Bsava Of Feline Practice A Foundation is available in our book collection an online access to it is set as public so you can download it instantly.

Our books collection spans in multiple countries, allowing you to get the most less latency time to download any of our books like this one.

Merely said, the Bsava Of Feline Practice A Foundation is universally compatible with any devices to read

F9C - SULLIVAN JOYCE

The BSAVA Guide to Procedures in Small Animal Practice provides practical, step-by-step guidance on how to perform the diagnostic and therapeutic procedures commonly performed in small animal veterinary practice. In addition, routine clinical examination of the major body systems, and protocols for the management of selected emergencies, are described. In addition to the actual technique, each procedure has information on indications and contraindications, equipment required, and potential complications, together with the editors' own hints and tips. Details of BSAVA Manuals where wider infor-

mation can be found, such as interpretation of results, are given throughout. All procedures have been reviewed and updated to ensure that this remains a truly useful resource for the veterinary team. New for this edition: Edrophonium response test Gall bladder aspiration Gastric decontamination Local anaesthesia Peritoneal dialysis Separate section on system examinations Additional illustrations, many in full colour

This completely new book takes the reader step-by-step through the most common diagnostic, medical, and surgical procedures used in canine and feline practice. Presented in an A to Z list to aid retrieval, the procedures de-

tail indications and contraindications; equipment and personnel required; step-by-step technique; complications; and after-care. Specially commissioned illustrations augment the text throughout, and a lay-flat binding increases useability.

Dermatology constitutes a large percentage of the daily caseload in small animal practice and can represent a challenge for the busy practitioner, as many different diseases have similar presenting signs. For this reason, a structured understanding of how to approach a dermatological case is essential for a successful outcome. The 4th edition of the BSAVA Manual of Canine and Feline Dermatology has been completely

updated, chapters have been expanded and structurally divided to include the management of specific diseases and common dermatological cases, such as ectoparasite infestation and its treatment and prophylaxis, atopic dermatitis and its management, superficial and deep pyoderma and their treatment, feline-specific conditions and their management, autoimmune and immune-mediated diseases and a targeted management, etc. New chapters have also been added to this new edition, such topical treatments, nutrients of the skin and regional dermatoses. The manual begins by providing the reader with a grounding in examination and investigative techniques, including a new chapter on cytology. The second section focuses on a problem-oriented approach to common dermatological conditions and their management. The final part of the manual covers the major skin diseases of dogs and cats. Under the guidance of the new editorial team, this new edition has been completely revised and updated. The book has been re-focused solely to cats and dogs and reorganized, while retaining the practical approach. The first sec-

tion covers anatomy and physiology of the oral cavity, diagnostic techniques, anaesthesia and analgesia, and dental instrumentation and equipment. There is also a separate chapter dedicated to operator health and safety considerations. The remainder of the manual focuses on conditions encountered in small animal practice, including developmental abnormalities, fractures and attrition. Inflammatory and infectious disease - stomatitis and periodontitis - are discussed in detail for both cats and dogs. A chapter on surgery details extraction procedures. The manual is illustrated throughout with full-colour photographs as well as retaining the clear procedural diagrams drawn by editor David Crossley.

This best selling manual has been fully revised and updated with the latest information. New chapters include neurological genetic disease testing and counselling; adjunctive therapies; and nutrition. This edition will also feature a DVD-ROM with video clips.

The first edition of the BSAVA Manual of Canine and Feline Haematology and Transfusion Medicine was a leader in its field,

and this new edition has been eagerly awaited. The basic principles of haematology, which form the core of the Manual, have been updated to include new diagnostic procedures and new treatment strategies. New authors provide a fresh perspective on some topics and there are new chapters on anaemia of inflammation and neoplasia, non-regenerative anaemia, and vascular thrombosis. The author panel is comprised of internationally recognized specialists from Europe, North America, the Middle-East and Australia. These have worked together with the Editors to produce an essential book for the veterinary practice.

The new edition of this popular manual has been extensively updated to reflect advances in this field, while readers will also find new chapters on inherited and cardiac disease. Clinical case studies have been retained, allowing readers to consider how they might approach common problems and see for themselves how test selection and interpretation are applied. Body systems are dealt with in their own discrete chapters, as are urinalysis, blood cells and proteins. Full-colour photographs and illustrations

can be found throughout, which will prove indispensable to clinical pathologists, clinicians and veterinary students keen to get grips with a rapidly expanding subject.

The BSAVA Manual of Canine and Feline Endoscopy and Endosurgery provides a comprehensive and practical guide for practitioners who wish to practice minimally invasive techniques. Routine procedures are described in detail and more advanced techniques suitable for advanced practitioners are also included.

- All the chapters have been thoroughly revised and updated
- Chapters on oesophagoscopy, interventional endoscopy and future developments are new to this edition
- More detailed information on minimally invasive techniques in cats included throughout
- The chapter on laparoscopy has been significantly expanded and covers techniques ranging from liver biopsy and ovariectomy to cholecystectomy and adrenalectomy

Exclusive video content New to this edition are a series of videos that accompany the chapters. These videos are available from the BSAVA Library.

Following the success of the first edition, this Manu-

al has been completely updated and reorganized to be even more practical and user-friendly. It follows reproductive medicine from mating, through conception and birth, looking at problems such as infertility and dystocia along the way. Care of the neonate plus conditions that may affect new puppies and kittens are also included. New developments in drugs and in biotechnology are discussed. Full colour photographs and illustrations support the text, which has been prepared by international contributors.

Following the success of previous editions, the BSAVA Manual of Canine and Feline Dentistry and Oral Surgery 4th edition is a timely publication in what is an internationally growing specialist field. It is an accessible source of core information for general small animal veterinary surgeons, students and nurses/technicians interested in developing their knowledge and practical skills in dentistry and oral surgery. New for this edition are the inclusion of step-by-step operative techniques with detailed full-colour photographs and new illustrations, including the process for taking dental radiographs, and techniques for the ma-

nagement of periodontal disease, dental and oral trauma, developmental disorders and neoplasia, and closed and open tooth extractions.

This new edition reflects the huge advances in the field of cardiothoracic medicine that have taken place over the past ten years. Illustrated throughout, it features contributions from leaders in the fields of cardiology and respiratory disorders from the United Kingdom, Europe and the United States. The approach of the Manual has been remodeled to enhance the practitioner's access to information. The Manual begins with a look at the clinical approach to a range of common presenting signs. This is followed by details of diagnostic tests and techniques, including imaging and blood pressure measurement. Therapeutic strategies for these are discussed, and detailed discussions of specific conditions are presented. Useful appendices include a drug formulary and ECG reference ranges

Extensively revised and updated, the new edition of the BSAVA Manual of Canine and Feline Abdominal Surgery provides a ready source of practical information for veterinary surgeons, students, nurs-

es and technicians. Includes detailed surgical procedures, laid out in step-by-step Operative Techniques in an easy to follow and practical way Notes on patient positioning and preparation, instrumentation and postoperative management Specially commissioned drawings and full-colour photographs illustrate both the Operative Techniques and the accompanying text New chapters on laparoscopic surgery and urinary incontinence From routine ovariohysterectomies to emergency abdominal drainage for acute peritonitis, abdominal surgery is an essential topic in general small animal practice The BSAVA Guide to Pain Management in Small Animal Practice is an essential reference guide for use in daily practice by all members of the veterinary team. Presented in an easy-to-read instructional format, this guide is intended to give practitioners practical information on pain management for small animals, including cats and dogs, birds, rabbits and exotic pets, with an emphasis on patient welfare and evidence-based medicine. The early chapters lay the foundations of pain management, including the

physiology of pain, acute and chronic pain, pharmacological treatment and physical treatment. The following chapters focus on particular pain scenarios, such as dental pain and cancer pain, using authors' perspectives and case examples to enhance guidelines.

Companion animals are undergoing previously un contemplated treatments and surviving what would once have been rapidly fatal conditions. This NEW Manual is aimed at the whole veterinary team, drawing on all their skills to help patients achieve as full a function and quality of life as possible after surgery, trauma or disease, and to manage chronic conditions effectively for the benefit of animal, owner and the practice team. Part One discusses the principles of rehabilitation, supportive and palliative care. The science behind pain and its management, clinical nutrition and physical therapies is explored, and clinical applications reviewed with reference to published evidence of efficacy and/or effectiveness. In Part Two, this truly innovative Manual presents a collection of Case Studies across a range of canine and feline patients - from discospondylitis to glauco-

ma in dogs and from triaditis to leg amputation in cats. The following are considered for every case, with expert assessment from the contributors to Part One of the book: • Acute and chronic pain management • Fear, stress and conflict concerns • Nutritional requirements • Physiotherapy • Hydrotherapy • Acupuncture • Nursing and supportive care • Owner advice and homecare recommendations.

This is more than just a management book! Written by a range of experienced authors who have designed and built surgeries, managed veterinary staff, bought and used the equipment, and 'cleaned the floors', this Manual brings ideas and guidelines that will be useful in improving and running a small animal veterinary business, whether established or new. Following a brief foray into the construction planning process, each area of the practice, both clinical and non-clinical, is considered in detail -- its design, equipment and maintenance, and the organization and management of the clinical and support teams. The second part of the Manual deals with communication and people management issues,

including leadership skills and self-management, together with the ethical and legal framework within which vets and vet nurses work. Thirdly, the business aspects of veterinary practice are explored, including planning, finance, marketing, the client experience and clinical governance. As well as being a daily source of information for veterinary surgeons and managers in companion animal practice, the Manual help support studies for certificates in practice management. It will aid preparation for PSS and VMD inspections, and will be of benefit to all practitioners wanting to improve their quality of service, premises and facilities, and the management of their clinical and support teams. Examples of forms, protocols and SOPs are given throughout and the book has a wealth of images to complement and enhance the text. The first BSAVA Manual of Practice Improvement was published in 1972; this completely new Manual will inspire and support a new generation of veterinary surgeons in their careers in small animal practice. This is a foundation level manual in the popular series from the BSAVA. It presents the basic princi-

ples upon which the practice of modern veterinary surgery is based. The principles of surgery will often dictate the outcome of a surgical procedure, more so than the use of the most up-to-date technique, and the surgeon ignores them at their peril. The BSAVA Manual of Surgical Principles presents a solid grounding in the basic principles, with practical examples of why they are important, creating a manual that is very readable and relevant for the veterinary surgeon in practice.

The growing importance that behaviour problems play in veterinary practice means that this new BSAVA Manual is very timely. Presented in a logical and easy to read format, the book answers many of the feline behavioural problems that the small animal practitioner faces on a daily basis. The first section is devoted to an overview of the factors which affect behaviour in the domestic cat. The book goes on to look at specific behaviour problems in more detail, using case histories where appropriate. Consideration is also given to the prevention of behaviour problems. BSAVA, BVNA and FECAVA members can

claim their member discount by ordering direct from: British Small Animal Veterinary Association Woodrow House, 1 Telford Way, Waterwells Business Park, Quedgeley, Gloucester, GL2 4AB, Tel: 01452 726709, Fax: 01452 726701, E-mail: publications@bsava.com The importance of animal behavior and psychological well-being is increasingly being recognized in the veterinary profession. This new edition is designed to be even more practical and user-friendly than the first. For a range of behavioral presentations, consideration is given to evaluation of the patient, including any possible underlying disease; evaluation of client attitudes, beliefs and behavior; risk evaluation; behavioral biology of the condition; acute management protocols; long-term treatment strategies; prognosis; follow-up; and preventive measures. A special chapter on shelter animals has been added, as this is an area where veterinary support is increasingly sought in both health and husbandry. An included CD offers client handouts, history-taking forms, detailed behavioral questionnaires for each species and a referral form. The BSAVA Small Animal

Formulary continues to be one of the Association's most valued practical resources for veterinary surgeons. This new Part A, devoted to cats and dogs, has been fully reviewed and updated with 26 new drugs added, reflecting the extensive choice of products now available. Additionally, the protocol section has been revised and updated. This edition has been produced as a soft bound book, unlike the previous spiral bound editions, helping it to fit the lab coat pocket. Part B of the 9th edition is dedicated to exotic pets.

The second edition of this best selling Manual has been thoroughly revised and updated under the direction of the new editorial team of John Williams and Alison Moores. Topics covered include wound healing, decision-making in closure, axial pattern flaps and pedicled muscle flaps. In addition, the Manual features case studies and step-by-step operative techniques. Specially commissioned illustrations accompany the chapters.

This new edition of one of the BSAVA's most popular Manuals has been extensively revised, drawing on the expertise of a predominantly new roster of authors. The Manual focuses

on common ophthalmic conditions in dogs and cats, structured into examination and clinical techniques; diagnosis and treatment of common ocular diseases, and a problem-oriented approach to common clinical presentations. The Manual provides an accessible source of practical information for general practitioners, veterinary students, nurses and technicians, and will also be a useful resource for those working toward specialist qualifications.

Covering both cats and dogs, this book places emphasis on practical aspects such as; diagnosis, history taking, and therapeutics.

Unlike many feline self-assessment reviews, *Feline Medicine - Review & Test* goes in-depth into more than 70 clinical cases from a panel of international experts. This handy manual covers common health conditions in cats with descriptive and diagnostic images and clinical and laboratory data. It challenges you to formulate a differential diagnosis, suggest a recommended therapy pathway, provide an educated prognosis, and propose ways of prevention — then reveals the definitive diagnosis, treatment, preventative

medicine, and final comments at the end of each case. You can also self-test on the go with the mobile-optimized companion website. More than 70 clinical cases presented in a convenient, quick-reference format *Focuses* on the needs of the general practitioner and the student to ensure it is of daily practical relevance. Panel of international experts contribute cases and offer authoritative guidance on the treatment of a variety of conditions ranging from the everyday to more unusual. Mobile-optimized companion website allows you to easily self-test on the go. Organized in a handy manual format with a flexicover that veterinary students can carry with them on clinical days, and veterinary surgeons an use as a reference in clinical practice. 265 full-color illustrations help engage and guide you through each case. Recommended list of further reading at the end of the book offers additional consultative information on the medical conditions addressed.

The third edition of the *BSAVA Manual of Canine and Feline Neurology* has been completely rewritten and restyled, reflecting the rapid and extensive advances that have taken

place in this field over the last 10 years. Accompanying chapters from neurology specialists across Europe and the USA are a set of stunning specially commissioned full colour illustrations. The book is divided into three sections. The first section discusses the essentials of neurological diagnosis including, examination, lesion localization, clinical pathology, electrophysiology, neuro-radiology and tissue biopsy. And it is within the neuroradiology chapter that the greatest differences from the previous edition are evident. Increased access to advanced imaging has greatly expanded neurological knowledge and here these techniques are explored in depth alongside thorough descriptions of radiographic techniques typically used in small animal practice. The second section focuses on clinical presentation and has been expanded with the addition of several new chapters on different presenting problems. This has been necessary due to the overwhelming increase in information now available on both new and previously described diseases. The aim of these chapters is to provide the practising veterinary surgeon with information identify the area of the

nervous system responsible for their patient's clinical signs. The reader is then guided through an appropriate diagnostic approach and the different diseases to be considered. Each chapter in this section presents the diseases in a similar fashion; detailing the clinical presentation, pathogenesis, diagnosis, treatment and prognosis of each disease. This is followed by the final section of completely new chapters devoted to the special treatment considerations necessary for the neurological patient. Considered here are emergency neurology presentations (e.g. head injury), neuroanaesthesia, clinical pharmacology, radiotherapy, neurosurgery and rehabilitation of the neurological patient.

This brand new Manual focuses on soft tissue surgery of the head, neck and thorax. Together with its companion volume, the BSAVA Manual of Canine and Feline Abdominal Surgery, it highlights for the veterinary surgeon in general practice the most commonly performed techniques. Procedures that are undertaken by those surgeons with more experience are also discussed so that practitioners can better inform their clients

as to clinical options. The Manual begins with a consideration of general patient assessment and stabilization, anaesthesia and analgesia, and postoperative care for surgical conditions of the head, neck and thorax. An illustrated description of surgical instruments and materials follows. Chapters on different organs/systems consider relevant anatomy, clinical signs and diagnostics, and medical treatment in addition to surgical techniques. Emergency management of respiratory distress is described, including instructions on how to perform an emergency tracheostomy. Surgical approaches to the thoracic wall and drainage of the thoracic cavity are described in detail and illustrated. Step-by-step Operative Techniques detail the common procedures in an easy-to-follow practical way, with notes on patient positioning and preparation, instrumentation and postoperative care. Full-colour photographs and specially commissioned drawings illustrate both the Operative Techniques and the accompanying text. Surgical diseases of the head, neck and thorax are considered a challenge by many surgeons. This Manual, written by an international

panel of authors, serves to demystify common techniques and provide a firm foundation for further development of surgical skills.

Since publication of the third edition in 2004 there have been important advances. Several endocrine disorders, such as feline acromegaly and hyperaldosteronism, have risen in importance. The use of diet and novel insulins in diabetic cats, and new drugs such as trilostane and methimazole, which were briefly mentioned in previous editions are now considered routine. In addition, the genetic risks associated with many disorders have been elucidated.

- A new chapter presents the principles of interpreting endocrine test results and discusses how test performance is assessed in relation to diagnostic confidence.
- The central section on glands and their diseases is presented in a standard format -- detailing physiology, aetiology, clinical features, diagnosis and treatment - to aid information retrieval.
- The final section has been rewritten to focus on solving clinical and clinicopathological abnormalities with an endocrine dimension.

Anaesthesia and analgesia is a constantly advancing

field and this new edition has been extensively revised and updated to take account of the latest techniques and considerations. The structure, which has worked so well for the previous editions, has been retained and there are new chapters on pain assessment methods, anaesthesia for MRI and how to manage chronic pain. Full-colour illustrations, tables and charts allow readers to easily visualise techniques, ensuring that this manual will be a must-have for any practice.

Fracture management has developed rapidly since the first edition of this manual was published. Fully revised and updated, this second edition has an increased focus on operative techniques and includes easy to follow guides with specially commissioned full-colour illustrations. The manual covers the background to fracture management, principles of fracture management, repair and management of specific fractures and the treatment and prevention of complications. New chapters address topics such as minimally invasive surgery, orthopaedic implants and bone grafts.

The past 20 years has

seen a remarkable growth in the knowledge base and skill set available in small animal practice the range of specialist information now available may appear daunting to the relatively inexperienced vet looking for a concise answer to one of the many common problems presented in the consulting room. Authored by vets with many years of experience in general practice, this new Foundation Manual aims to provide the first port of call for the busy practitioner faced with uncertainty over a new case. Common sense, first line approaches are given in a problem oriented setting stemming from the nose to tail examination. The Manual is broadly divided into three sections: The Art of Canine Practice Common Consultations Common Clinical Presentations.

Authored by vets with experience in all aspects of avian care, this manual is an essential tool for those in general practice who do not often see birds. Subjects including anatomy and physiology, husbandry, behaviour, examination, surgical techniques are covered in detail; common presentations are also dealt with in individual chapters. Includes Quick Reference Guides Informative and de-

tailed appendices Clinical signs-based section, exploring particular conditions in detail

The BSAVA Manual of Canine and Feline Abdominal Imaging is the third Manual in the diagnostic imaging series. The first section of the Manual outlines the approach to abdominal imaging, with chapters dedicated to radiography and ultrasonography. The remainder of the Manual is devoted to the individual body systems, including the liver and gallbladder, the kidneys and ureters, and the small intestine. Extensively illustrated throughout.

This new addition to the BSAVA Foundation Manual series serves to provide an easily accessible source of practical advice on the management of common feline problems encountered in first-opinion practice. It begins with an introduction to important general issues in effective feline practice, including handling techniques, principles of examination and how to ensure a cat-friendly practice. Gold-standard preventive healthcare guidelines focusing on a life-stage approach and a discussion on therapeutics including antibiotic use, analgesia and anaesthesia follow. The main part of the Manu-

al comprises problem-oriented sections that focus on the investigation and initial management of, first, emergencies and then other common presentations such as alopecia, polydipsia and seizures. The final systems-based section gives more detailed information on the management of the disorders commonly seen in general practice. The Manual gives enough information for any vet to deal very competently with commonly seen feline problems, also providing guidance on where to go for further information if required. Where appropriate, guidelines are also given for when referral should be considered, and for situations where financial limitations may exist. A unique feature of this Manual are the many 'Quick Reference Guides' (QRGs) provided throughout, which present practical techniques and treatments in easy-to-follow step-by-step guides, with clear colour photographs illustrating each step whenever possible. The international panel of authors were carefully chosen for their practical expertise and passion in different areas of feline practice. The practical and easy-to-follow advice provided in this Manual

makes it essential reading for all new graduates and first-opinion vets who see feline cases, as well as veterinary students and veterinary nurses worldwide.

Building on the success of previous editions, the Editors have sought to marry the best of the old with the new. All chapters have been updated, or rewritten, by international experts to encompass the important advances made over the last several years, while keeping the text practical and user-friendly. The principles of diagnostics and clinical staging and of the main therapeutic modalities are outlined. Individual tumour types in the body systems of dogs and cats are then described, using a common approach to aid information retrieval on aetiology and pathogenesis, presentation and clinical signs (including staging/grading of tumours), management, and prognosis. A wealth of new photographs has been included to illustrate the clinical, diagnostic and therapeutic aspects of a range of tumours. The growing importance of ethical considerations and palliative care are also recognized, and exciting developments and treatment possibilities ex-

plored.

This unique book, written by specialists from the UK, the USA, Canada, Australia and South Africa, bridges the disciplines of clinical pathology, internal medicine and critical care in a single volume. The Manual is divided into three sections: haematology, haemostasis and transfusion medicine. Within each section, review chapters are augmented by contributions on selected topics of interest to the practitioner. Methods of sample collection and interpretation for routine haematology, haemostatic function and bone marrow analysis are reviewed and new developments, such as flow cytometry for typing leukaemias, outlined. The diagnosis and management of a range of major infectious, immune-mediated and neoplastic diseases of the haematopoietic system are discussed. A chapter on canine babesiosis is timely, given the recent reports of cases in the UK, and a chapter is also included on the feline pathogen *Haemobartonella felis*. A wealth of excellent colour photographs throughout the book illustrates cell types and abnormalities, plus techniques such as blood transfusion. The range of

coverage and the practical information in this Manual will render it of great value in the practice setting. BSAVA, BVNA and FECAVA members can claim their member discount by ordering direct from: British Small Animal Veterinary Association Woodrow House, 1 Telford Way, Waterwells Business Park, Quedgeley, Gloucester, GL2 4AB, Tel: 01452 726709, Fax: 01452 726701, E-mail: publications@bsava.com Prior to publication of the first edition of *Clinical Medicine of the Dog and Cat*, no other comprehensive small animal veterinary medicine book existed with a comparable amount of relevant illustrated material. This new third edition continues and expands on the revolutionary approach of the previous two editions, now including more than 1,850 highly valuable clinical colour photographs, diagrams, and tables. The third edition of this book has been completely revised and updated. The book is now divided into five color-coded sections – General Approach, Disease of Specific Organ Systems, Multisystemic Disorders, Elements of Therapy and Case Studies. As with the first and second editions of this book the over-

riding principle of succinct, yet comprehensive text presented in a clear format with an abundance of good quality images remains. Section I: General Approach is completely new and covers medical history and client communication, and common clinical problems. Section II: Specific Organ Systems is organized by body system with chapters structured in a systematic manner that include the definition for each disorder, its causes, clinical features, differential diagnoses, diagnostic methodology, treatment and prognosis, providing readers with easy access to important clinical information. New to this section are chapters covering diseases of the oral cavity and teeth, approach to thoracic radiographs, approach to abdominal radiographs, and disorders of hemostasis. Section III: Multisystemic Disorders covers revised and updated chapters including clinical toxicology, infectious diseases, and immunologic disorders. Section IV: Elements of Therapy covers therapies such as fluid therapy, pain management, nutrition of the critically ill dog and cat and a new chapter on management of the obese dog or cat. Section V: Case

Studies includes over 25 case studies that enable the reader to relate the knowledge gained in the book to clinical cases seen in practice. Written by board-certified experts with several case contributions by clinicians in advanced phases of resident training, topics were carefully selected to make this a valuable resource to the general practitioner and also to small animal interns and veterinary students. Problems with breeding of dogs and cats and the complications of whelping and kitting are commonly dealt with by veterinary surgeons in practice. Success depends on a full appreciation of the normal events involved in reproduction, and the problems that may arise. The international contributors of this book describe the normal physiological basis of fertility and reproduction, and the approach to problems seen in practice. Male and female infertility in the dog and cat are fully discussed, along with mating and the techniques of artificial insemination in both species. Sections on pregnancy, parturition and dystocia are followed by a detailed guide to the all-important

care of the neonate, with considerations of congenital problems and the role of infectious diseases and vaccination in young puppies and kittens. Comprehensive sections on drug therapy and surgery for reproductive problems in the dog and cat are included. This is a very practical book, fully illustrated and with a wealth of information to guide the reader through the approach to and treatment of reproductive disorders of small animals. It is a valuable and convenient source of reference for veterinary surgeons, veterinary students, veterinary nurses and all those involved in dealing with problems associated with the breeding of dogs and cats. BSAVA, BVNA and FECAVA members can claim their member discount by ordering direct from: British Small Animal Veterinary Association Woodrow House, 1 Telford Way, Waterwells Business Park, Quedgeley, Gloucester, GL2 4AB, Tel: 01452 726709, Fax: 01452 726701, E-mail: publications@bsava.com Want access to this book online? The full book content is also available as part of VetConsult, an online subscription platform

with a powerful search function. Find out more at www.wiley.com/learn/vetconsult and subscribe today at <https://vetconsult.wiley.com/subscription>. Blackwell's Five-Minute Veterinary Consult Clinical Companion: Canine and Feline Behavior, Second Edition offers fast access to reliable, practical information on managing common behavior disorders in dogs and cats. Takes a new section approach to allow for easier browsing Adds 19 new topics or algorithms covering separation anxiety, thunderstorm sensitivity, introducing pets to the family and each other, enrichment, geriatric behavior problems, handling techniques, urine marking, leash reactivity, pediatric behavior problems and best practices, and rescue pets Offers a comprehensive guide to diagnosing and managing behavior problems in dogs and cats Designed for fast access to information, with identically formatted topics for ease of use Includes access to a companion website providing 43 client education handouts for download and use, including 25 brand-new handouts
