Arrhythmia Recognition, Second Edition teaches any student how to interpret a rhythm strip using foundational concepts and a step-by-step approach, covered in an unintimidating, conversational writing style that facilitates learning of this complex subject. This text is appropriate for anyone--nurses, physician assistants, cardiovascular technicians, allied health professionals, paramedics, medical students, and physicians--wishing to learn how to accurately interpret based on a solid understanding of electrophysiology and pathophysiologic mechanisms in the heart, and how these translate to the rhythm strip. It is also an excellent reference text for instructors wishing to expand their knowledge of arrhythmia interpretation. This edition includes full coverage of wide-complex tachycardias in four chapters: the basics, the criteria, the approach, and a chapter on synthesis/interpretation, presented in a case study format. Beginner's Perspective boxes written by someone new to arrhythmia recognition provide tips and insight on how to approach the material as a beginner. This edition also includes chapter objectives written to Bloom's taxonomy.

his book on radiation protection provides clear coverage of essential concepts, plus the latest technology and new recommendations of the International Commission on Radiological Protection. A clear presentation of introductory concepts and essential physics explains the nature and scope of radiation protection; and a discussion of the bioeffects of radiation provides rationale for today's protection concerns. Coverage includes: principles and objectives of radiation protection; a system of dose limitations; dose limits; radiation dosimetry; protection surveys; expressions of patient dose;

factors influencing radiation dose in imaging; dose reduction techniques; and quality assurance. Safety issues are emphasized, as well as recommendations for the prudent use of magnetic resonance imaging

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

"This book revives and vastly expands the classical theory of resultants and discriminants. Most of the main new results of the book have been published earlier in more than a dozen joint papers of the authors. The book nicely complements these original papers with many examples illustrating both old and new results of the theory."—Mathematical Reviews

Planned, developed and written by practising classroom teachers with a wide variety of experience in schools, this maths course has been designed to be enjoyable and motivating for pupils and teachers. The course is open and accessible to pupils of all abilities and backgrounds, and is differentiated to provide material which is appropriate for all pupils. It provides spiral coverage of the curriculum which involves regular revisiting of key concepts to promote familiarity through practice. This teacher's file is designed for stage two of Year 9.

Focus builds an overall framework for understanding the organization of the English language and helps students recognize the inseparable relationship between form, meaning, and use. The Instruc-

tor's Manual provides teaching suggestions, and an answer key for the exercises and chapter exams in the Student's Book.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances

where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

Intended for students who have already completed a one-year course in elementary calculus, this two-part treatment advances from functions of one variable to those of several variables. Solutions. 1971 edition.

The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government.
