~~Chemistry and Technology of Lubricants | Roy M. Mortier...~~

The impetus for lubricant development has arisen from need, so lubricating-practice has preceded an understanding of the scientific principles. This is not surprising as the scientific basis of the technology is, by nature, highly complex and interdisciplinary.

The Chemistry and Technology of Lubricants describes the chemical components that contribute to the formulation of liquid lubricants followed by dis-

cussion of lubricant technology for specific applications. The individual components are described in Part I: Base Fluids and in Part II: Additives.
