### Quiz: The Periodic Table - CliffsNotes

All the different elements are arranged in a chart called the periodic table. A Russian scientist called Dmitri Mendeleev produced one of the first practical periodic tables in the 19th century....

Periodic table, in full periodic table of the elements, in chemistry, the organized array of all the chemical elements in order of increasing atomic number —i.e., the total number of protons in the atomic nucleus.

A mnemonic is a memory aid used to improve long term memory and make the process of consolidation easier. Many chemistry aspects, rules, names of compounds, sequences of elements, their reactivity, etc., can be easily and efficiently memorized with the help of mnemonics.

The Periodic Table is for many the symbol of Chemistry. It is a single image that contains all of the known elements in the universe combined into an easily readable table. There are many patterns present in the table as well. All of the elements seem to fit together and connect to form a readable table and in turn the image of chemistry.
