By John Santiago . Laplace transforms can be used to predict a circuit's behavior. The Laplace transform takes a time-domain function  $f(t)$ , and transforms it into the function  $F(s)$  in the  $s$ -domain. You can view the Laplace transforms  $F(s)$  as ratios of polynomials in the  $s$ -domain. If you find the re-

al and complex roots (poles) of these polynomials, you can get a general idea of what the ...
