Computer Organization and Design: The Hardware/Software Interface, Third Edition. As with previous editions, a MIPS processor is

the core used to present the fundamentals of hardware technologies at work in a computer system. The book presents an entire MIPS instruction set—instruction by instruction—the fundamentals of assembly language, computer arithmetic, pipelining, memory hierarchies and I/O.

In computer engineering, microarchitecture, also called computer organization and sometimes abbreviated as  $\mu$ arch or uarch, is the way a given instruction set architecture is implemented in a particular processor. A given ISA may be implemented with different microarchitectures; implementations may vary due to different goals of a given design or due to shifts in technology. Computer architecture is the combination of microarchitecture and instruction set architecture.
