In computer science, the analysis of algorithms is the process of finding the computational complexity of algorithms - the amount of time, storage, or other resources needed to execute them. Usually, this involves determining a function that relates the length of an algorithm's input to the number of steps it takes (its time complexity) or the number of storage locations it uses (its space ...

In our previous articles on Analysis of Algorithms, we had discussed asymptotic notations, their worst and best case performance etc. in brief. In this article, we discuss analysis of algorithm using Big - O asymptotic notation in complete details.. Big-O Analysis of Algorithms. The Big O notation defines an upper bound of an algorithm, it bounds a function only from above.
