Written by nationally and internationally recognised experts on the design, evaluation and application of such systems, this book examines the impact of practitioner and patient use of computer-based diagnostic tools. It serves simultaneously as a resource book on diagnostic systems for informatics specialists; a textbook for teachers or students in health or medical informatics training programs; and as a comprehensive introduction for clinicians, with or without expertise in the applications of computers in medicine, who are interested in learning about current developments in computer-based diagnostic systems. Designed for a broad range of clinicians in need of decision support.

This unique book provides a comprehensive picture of the vivid kaleidoscope of traditional medicine in Asia presented by 34 eminent authors from 15 countries belonging to the different systems like Ayurveda and Chinese Traditional Medicine. Important emerging areas such as harmonization of the traditional

systems with modern medicine and the growing role of these systems in the health care structure of countries are also dealt with. Legislation and regulation of these systems and practitioners, an area of growing concern, the need for good preclinical toxicology studies and scientific clinical evaluation of the products and medicinal plants used for therapy are exhaustingly dealt with. The vital issue of protection of traditional systems of medicine and patenting of medicinal plants is discussed in detail. The book is replete with suggestions, and ideas aimed at making traditional systems more effectively, and more widely used for health care. The book also covers the prevailing situation regarding the use and other aspects of traditional medicine in the 10 Member countries of the South-East Asia Region of the World Health Organization.

In the last decade, genetics has been emerging as a primary issue in the diagnosis and management of cardiomyopathies. This book is intended to be a state-of-the-art monograph on these diseases, describing their genetic causes,

defining the molecular basis and presenting extensive descriptions of genotype-phenotype correlations. Other chapters are focused on the role of clinical observation, on ECG and echocardiography. With its highlight on the most recent discoveries in the field of molecular genetics as well as on the correct clinical approach to patients with heart muscle disease, the book is aimed at physicians and clinical cardiologists with a particular interest in myocardial diseases and in their genetic causes.

A foundational textbook on the scientific principles of therapeutic herbalism and their application in medicine • A complete handbook for the medical practitioner • Includes the most up-to-date information on preparations, dosage, and contraindications • By the author of *The Complete Illustrated Holistic Herbal Medical Herbalism* contains comprehensive information concerning the identification and use of medicinal plants by chemical structure and physiological effect, the art and science of making herbal medicine, the limitations and potential of viewing herbs chemically, and the challenge to current research paradigms posed by complex plant medicines. It also includes information on toxicology and contraindications, the issues involved in determining dosage and formulation types for an individual, guides to the different measurement systems and conversion tables, and the pros and cons of both industrial and traditional techniques. With additional sections devoted to the principles of green medicine, the history of Western Herbalism, the variety of other medical modalities using medicinal plants, an extensive resource directory, and a discussion of treatments organized by body system, *Medical Herbalism* is the comprehensive textbook all students and practitioners of clinical her-

balism need to develop their healing practices.

Now available in a compact 4" x 7" format, this portable reference covers the management of emergency conditions seen in pediatric patients. The Fourth Edition includes new sections on pediatric emergency radiology and sports injuries, plus expanded material on infectious diseases and environmental emergencies. . . "very well written. . . more complete than traditional pocket books." -*Pediatric Emergency Care Review*-review of the previous edition.

This is a Pageburst digital textbook; the product description may vary from the print textbook. Make learning medical terminology faster and more fun with *Quick & Easy Medical Terminology, 6th Edition!* Featuring CDs with interactive games and audio pronunciations, this book helps you begin reading, writing, and speaking medical terms in the shortest time possible. Small chunks of information are always followed immediately by exercises, so students will be learning "every minute!" The many puzzles, activities, and games make it easier to understand and remember terminology. Written in a clear, conversational style by Peggy C. Leonard, MT, MEd, this book gives you the tools to communicate effectively in the health care environment. A companion CD reinforces learning with fun, interactive exercises, including medical reports and Hear It/Spell It exercises. Two audio CDs let you listen to correct pronunciations of medical terms and encourage you to pronounce each term aloud. A flexible, body systems organization lets you go through the material in any order after completing the orientation chapters, making it easy to coordinate your study with other courses such as anatomy and physiology. The pro-

grammed learning approach presents content in small blocks called 'frames' that allow you to learn the content and get immediate feedback on your progress before proceeding. Diverse learning styles are accommodated by a wide variety of exercises -- labeling diagrams, writing terms, choosing pronunciation accents, recognizing misspelled terms, matching word parts, interpreting terms within health reports, and categorizing terms. Unique! A conversational writing style makes the book more readable and enjoyable. Unique! Thorough explanations of terms help you understand and remember the material by presenting terminology in a medical context. A consistent format to body systems chapters uses categories to simplify the learning of terms, with each chapter including function; structure; diseases, disorders, and diagnostic terms; and surgical and therapeutic interventions. Healthcare reports and case studies allow you to apply your knowledge to real-life situations. A review of anatomy and physiology at the beginning of each body systems chapter provides a context for understanding the medical terminology. Drug information is integrated into the body systems chapters, with detailed information on specific drugs on CD. Caution boxes alert you to confusing terms. Spanish translations of key terms are listed in each chapter to help you communicate with Hispanic patients; glossaries are included in the appendix. Comprehensive end-of-chapter reviews correspond to the learning objectives at the beginning of the chapter. A bookmark includes a quick-reference guide to pronouncing terms plus a list of pronunciation symbols. A companion Evolve website includes study tips, electronic flashcards, Body Spectrum coloring pages, an English/Spanish glossary, learning activi-

ties that include Spanish term exercises, updates, and links to related sites. More short exercises include Find the Clue and Connections puzzles, letting you check your learning more often and stay on track. Procedures and terminology updates keep you current with new technologies and terms you'll encounter in the workplace. Quick Tips in the margins add essential information and interesting, fun facts. Games add fun and competition to exercises on the companion CD. More medical reports with exercises are included on the CD, allowing you to use terms in real-life situations.

**THE DEFINITIVE GUIDE TO INPATIENT MEDICINE, UPDATED AND EXPANDED FOR A NEW GENERATION OF STUDENTS AND PRACTITIONERS** A long-awaited update to the acclaimed Saint-Francis Guides, the Saint-Chopra Guide to Inpatient Medicine is the definitive practical manual for learning and practicing inpatient medicine. Its end-to-end coverage of the specialty focuses on both commonly encountered problems and best practices for navigating them, all in a portable and user-friendly format. Composed of lists, flowcharts, and "hot key" clinical insights based on the authors' decades of experience, the Saint-Chopra Guide ushers clinicians through common clinical scenarios from admission to differential diagnosis and clinical plan. It will be an invaluable addition -- and safe-

ty net -- to the repertoire of trainees, clinicians, and practicing hospitalists at any stage of their career.

This report aims to gather the lessons learnt on the effects of HIT to costs and benefits that might be of use to organisations looking to develop and implement HIT programmes. This is a difficult exercise considering the multiple factors affecting implementation of an HIT programme. Factors include organisational characteristics, the kinds of changes being put in place and how they are managed, and the type of HIT system. The report finds that barriers to HIT implementation are still substantial but that some progress has been made on reporting the organisational factors crucial for the adoption of HIT. However, there is a challenge to adapt the studies and publications from HIT leaders (early implementers and people using HIT to best effect) to offer lessons beyond their local circumstances. The report also finds limited data on the cost-effectiveness of HIT.

In *Research as Development*, Salla Sariola and Bob Simpson show how international collaboration operates in a setting that is typically portrayed as "resource-poor" and "scientifically lagging." Based on their long-term fieldwork in Sri Lanka, Sariola and Simpson bring into clear ethnographic focus the ways international scientific collaborations feature prominently in the pursuit of global health in which research operates "as" development and not merely "for" it. The authors follow the design, inception, and practice of two clinical trials: one a global health charity funded trial and the other a pharmaceutical industry-sponsored trial. *Research as Development* situates these two trials within their historical, political and cultural contexts and thus counters the idea that local actors

are merely passive recipients of new technical and scientific rationalities. While social studies of clinical trials are beginning to be an established niche in academic writing, *Research as Development* helps fill important gaps in the literature through its examination of clinical research situated in cultures in low-income settings. *Research as Development* is noteworthy for the way it highlights the critical and creative role that local researchers play in establishing international collaborations and making them work into locally viable forms. The volume shows how these clinical and research interactions bring about changes in culture, technologies and expertise in Sri Lanka, contexts that have not previously been written about in any detail.

This book provides a comprehensive view of the methodologies used for the study of liver toxicity encountered throughout the whole life cycle of a drug, from drug discovery, to clinical trial, post-marketing, and even clinical practice. Organized into six sections, the first section introduces the mechanisms contributing to drug-induced liver toxicity.

The second and third section explore in silico and in vitro approaches used to help mitigate hepatotoxicity liability at the early stages of drug development. The fourth section describes methodologies applied in regulatory processes, including preclinical studies, clinical trials, and post-marketing surveillance. The fifth section discusses clinical hepatotoxicity. Emerging technologies are examined in the final section. As a volume in the Methods in Pharmacology and Toxicology series, chapters include the kind of expert advice that will lead to optimal results. Authoritative and practical, Drug-Induced Liver Toxicity serves all those who aim to improve assessment and understanding of hepatotoxic potentials of new medications and marketed drugs. Chapter 30 is open access under a CC BY 4.0 license via [link.springer.com](http://link.springer.com).
