D5D - YU KOCH

Directing his polemics against the pedantry of his time, Galileo, as his own popularizer, addressed his writings to contemporary laymen. His support of Copernican cosmology, against the Church's strong opposition, his development of a telescope, and his unorthodox opinions as a philosopher of science were the central concerns of his career and the subjects of four of his most important writings.

Galileo, who had discovered the principle of inertia, saw that this did not require a special motion at all, but was a direct consequence of his principle. At first he used his discovery in support of Copernicus.

The excerpts from Galileo have been edited to maintain the focus on why Galileo is important to history and science, without losing his flavor or his pugnacious style. The point made by Galileo himself and the book are that Galileo pointed out that from then on, evidence would be the standard by which we would judge our knowledge of the world, not authority, word-play, logical proofs or arguments, etc.
