78C - BELTRAN MAXIMILLIAN

The 1st law of thermodynamics — The 1 st law is the thermodynamic application of the principle of conservation of energy to thermal systems, relating internal (thermal) energy and macroscopic work. System thinking is critical here. The 2nd law of thermodynamics — The 2 nd law a new kind of principle: a probabilistic physical law. Due to the large number of particles in the systems we typically consider, the randomness of thermal motion averages out and leads to a number of powerful tools ...
