working together in a safe, stress-free, productive ergonomic environment. In the hands of a skilled dental team, this combination ensures stress reduction, increased productivity,...

Four handed dentistry. 1. FOUR HANDED DENTISTRY. 2. • Four-handed dentistry may sound like something a space alien should be doing, but really it is simple to understand. • It simply means that the dental assistant's two hands are assisting the dentist's two hands, helping to reduce the amount of time a dental exam or procedure may take.

There are four major branches of modern dentistry: preventive dentistry, oral surgery, orthodontics, and pedodontics. Preventive dentistry involves the diagnosis, prevention, and treatment of diseases of the teeth (cavities, pulpitis, periodontitis), periodontosis, and diseases of the oral mucosa.

Handling every tool and procedure on their own, dentists spent many uncomfortable hours each workday stooping over patients' mouths. In the 1960s, though, researchers and clinicians at UAB's School of Dentistry introduced a second person into the practice environment—and the concept of "four-handed dentistry" was born.
