Heat capacity or thermal capacity is a physical property of matter, defined as the amount of heat to be supplied to a given mass of a material to produce a unit change in its temperature.. The SI unit of heat capacity is joule per kelvin (J/K).. Heat capacity is an extensive property.The corresponding intensive property is the specific heat capacity.Dividing the heat capacity by the amount of ...

8(a) Physical Properties of Water

Heat capacity is the amount of energy (heat) needed to increase temperature of a substance by one degree. It reflects the capacity of the substance to retain heat. As defined, heat capacity has only a limited application since it is extensive property i.e. depends on mass of the substance. In Physics, specific heat ...
