Geometry on the sphere. We want to explore some aspects of geometry on the surface of the sphere. This is an interesting subject in itself, and it will come in handy later on when we discuss Descartes's angle-defect formula. Discussion. Great circles on the sphere are the analogs of straight lines in the plane. Such curves are often called ...

This remarkable book endures as a true masterpiece of mathematical exposition. The book is overflowing with mathematical ideas, which are always explained clearly and elegantly, and above all, with penetrating insight. It is a joy to read, both for beginners and experienced mathematicians. Geometry and the Imagination is full of interesting facts, many of which you wish you had known before.

Geometry and the Imagination is full of interesting facts, many of which you wish you had known before. The book begins with examples of the simplest curves and surfaces, including thread constructions of certain quadrics and other surfaces.

Geometry and the Imagination is a mathematics book, written at the popular level by a great mathematician and a younger colleague, but without condescension to the intended audience. Although richly illustrated with over 300 pictures, it is not an easy read — the pages are densely packed with information, presented with a minimum of technicalities.

The book is a thrilling journey in the wide (wild) world of geometry, instructive and sometimes illuminating, spanning an incredible amount of concepts and subjects, enriched by splendid figures... But, but, by no means "easy".

This document consists of the collection of handouts for a two-week summer workshop entitled 'Geometry and the Imagination', led by John Conway, Peter Doyle, Jane Gilman and Bill Thurston at the Geometry Center in Minneapolis, June 17-28, 1991.

An online course by John Conway, Peter Doyle, Jane Gilman and Bill Thurston in HTML and PostScript.

It has been a busy quarter. Since August, I have made 10 trips, to conferences or to give colloquia. On 8 out of the 10 trips, I talked about a recent joint project with Sarah Koch and Alden Walker, on a topic in complex dynamics; our paper is available from the arXiv here.. Giving essentially the same talk 8 times (to reasonably large crowds each time) is an interesting experience.
