Stanford's state of the art gastrointestinal motility program supports one of the largest motility practices in the region. We have a major research effort into the enteric nervous system, pain and stem cell research with an emphasis on translational research. Stanford is part of the NIH funded consortium in gastroparesis.

Gastrointestinal Motility Program | Stanford Health Care

The GI Motility Program provides interdisciplinary, individualized care for patients with digestive tract problems. The program is a national leader in advancing the diagnosis and treatment of irritable bowel syndrome and other disorders.

GI Motility Program | Cedars-Sinai

Disorders of gastrointestinal (GI) transit and motility are common, and can affect one or more regions of the GI tract . This topic will review the indications, technique, and interpretation of the results for

commonly performed tests to evaluate GI tract motility. Specific motility disorders are discussed in detail elsewhere.

GI Services at the Gastrointestinal Physiology and Manometry Laboratory. Secretin Stimulation Test: Measures the ability of the pancreas to respond to secretin, a digestive hormone. Gastrointestinal Motility Studies: Exam to look at how the stomach and upper small intestinal muscles contract.

Gastrointestinal Diagnostics & Procedures | Michigan Medicine

Endoscopy — Examines the inside of the body using a lighted, flexible instrument called an endoscope. This includes colonoscopy — a screening specific to the colon and rectum. GI Motility Testing — Diagnoses motility (movement) disorders of the esophagus using tests performed in the GI Manometry Lab.

Gastrointestinal (GI) Diagnosis - Froedtert Hospital

Topics include impedance studies, high-res-

olution manometry, sensitivity testing, gastric emptying scintigraphy, breath testing for carbohydrate malabsorption and bacterial overgrowth, new tests like wireless motility capsule for evaluation of regional and whole gut transit/motility, functional brain imaging in GI neurophysiology ...
