Go to <http://climate.nasa.gov/> and list the five key indicators that NASA scientists use as indicators of climate change (along the bottom of the page) Updated 8/20162 Click on the title of your assigned key indicator at the bottom of the page and read the interactive graph(s) and text to help you begin your research.

Carbon dioxide (CO₂) is an important heat-trapping (greenhouse) gas, which is released through human activities such as deforestation and burning fossil fuels, as well as natural processes such as respiration and volcanic eruptions. The first graph shows atmospheric CO₂ levels measured at Mauna Loa Observatory, Hawaii, in recent years, with average seasonal cycle removed.

Global Warming / Climate Change Frequently Asked Questions ...

Scientists attribute the global warming trend observed since the mid-20th century to the human expansion of the "greenhouse effect"¹ — warming that results when the atmosphere traps heat radiating from Earth toward space. Certain gases in the atmosphere block heat from escaping.

Global Climate Change Pogil Answer Key - YouTube

ANSWER KEY . Global and Regional Climate Change Pre-test . All answers should be concise and succinct. 1) Please refer to the IPCC figure on the right (SPM.1) and state the relationship between carbon dioxide, methane gas, and nitrous oxide, including any patterns you notice during the last 200 years.

ANSWER KEY Global and Regional Climate Change Pre-test All ...

The climate of the earth is always changing. These changes are due to natural causes, the effects of the sun, land,

oceans and atmosphere. Humans are changing current climate through the production of greenhouse gases in the atmosphere such as carbon dioxide (CO₂), methane and nitrous oxide.

Climate change resources: Key Stage Three

The global climate has been changing since time began and will continue to change into the future. The Earth's temperature has fluctuated in the last few hundred years. However, since around 1950...

Global warming and climate change effects: information and ...

This broad consensus that climate change is happening and is caused primarily by excess greenhouse gases from human activities is based on multiple lines of evidence, from basic physics to the patterns of change through the climate system (including the atmosphere, oceans, land, biosphere, and cryosphere).

Climate Change Facts: Answers to Common Questions ...

The following organizations provide re-

viewed listings of the best available student and educators resources related to global climate change, including NASA products. NASA's Climate Kids NASA's Climate Kids website brings climate science to life with fun games, interactive features and exciting articles.

For Educators | NASA Global Climate Change - climate.nasa.gov

Climate change is leading to rising sea levels, water shortages, and more erratic, extreme weather conditions. We've already felt the effects of these shifts, but if we're not careful things will only get worse and more people will fall victim to the ripple effects of a hotter Earth.

Climate Change - BrainPOP

Climate change refers to a broad range of global phenomena created predominantly by burning fossil fuels, which add heat-trapping gases to Earth's atmosphere. These phenomena include the increased temperature trends described by global warming, but also encompass changes such as sea-level rise; ice-mass loss in Greenland, Antarctica, the Arctic and mountain glaciers worldwide; shifts in flower and

plant blooming; and extreme weather events.
