It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been

taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

The south-eastern part of France has an abundance of historical interest. From the Roman theatres of Arles and Orange to the Cathar castles in the foothills of The Pyrenees there is much to see and remember. There are mysteries too. Why would the Roman Catholic Church create a crusade against the Cathar 'heretics' when these people were following such a devout life? How did the Romans build the Pont du Gard so quickly as part of a 40-mile water channel to provide water to Nimes? What did Bérenger Saunière discover in Rennes-le-Chateau that made him so wealthy? Added to the history and the mystery are a host of natural won-

ders, beautiful scenery, and familiar names appearing in unfamiliar places.

After enduring years of hunger, deprivation, and devastating loss at the hands of the Khmer Rouge, ten-year-old Loung Ung became the "lucky child," the sibling chosen to accompany her eldest brother to America while her one surviving sister and two brothers remained behind. In this poignant and elegiac memoir, Loung recalls her assimilation into an unfamiliar new culture while struggling to overcome dogged memories of violence and the deep scars of war. In alternating chapters, she gives voice to Chou, the beloved older sister whose life in war-torn Cambodia so easily could have been hers. Highlighting the harsh realities of chance and circumstance in times of war as well as in times of peace, Lucky Child is ultimately a testament to the resilience of the human spirit and to the salvaging strength of family bonds.

By using a series of studies of contemporary mainstream Hollywood movies - Blue Velvet, Wall Street, Crimes and Misdemeanors, When Harry Met Sally, sex lies and videotape, Do the Right Thing - Norman K Denzin explores the tension between ideas of the postmodern, and traditional ways of analyzing society. The discussion moves between two forms of text: social theory

and cinematic representations of contemporary life. Denzin analyzes the ideas of society embedded in poststructuralism, postmodernism, feminism, cultural studies and Marxism through the ideas of key theorists (Mills, Baudrillard, Barthes, Habermas, Jameson, Bourdieu, Derrida and others). He relates these ideas to the problematic of the postmodern self as e

The Command to Look was one of William Mortensen's most influential and sought-after books, and has been out of print for fifty years. In 2002, Grace J. Scott began to receive messages from those beyond the grave. Grace felt it her duty to record their voices, their thoughts, and even their warnings. *Awakening of the Soul* is the amazing result. This intriguing collection of channeled thoughts from souls in heaven, other planetary systems, and other universes will benefit those seeking spiritual growth as well as those wanting information about preparing for upcoming Earth changes. Much of the material is packed with information and requires time to read and digest while other material is simple and easily understood. Presented in chronological order as received in reflexology sessions, the conversations are completely original, unedited, and unorganized, straight from the spirit itself. Some spirits channeled big lessons for the general public or gave messages to individuals while some explained disasters, politics, wars, dreams, and events in our daily lives. But all of the souls have one thing in common: they bring news that Earth is cleansing itself at a rapid pace, and they are here to assist us through the cleansing and beyond. Epic in scope, *Awakening of the Soul* is a vital tool for those looking to the future and to the fate of Earth itself.

This book captures information about early childhood education and care (ECEC) policies and practices in different countries and aims to question the degree to which these countries have managed to meet the needs of children, families, and the ECEC workforce. The book illustrates how different countries have adapted different strategies focusing on policy when it comes to quality ECEC. The goal of the book is twofold. First and foremost, it aims to present key findings and challenges for improving ECEC as a whole. Second, it aims to highlight problems and concerns which the field of ECEC faces, with respect to delivering high-quality care and education to all children. As neither "ECEC" nor "quality" are universal concepts - but are shaped by social-cultural values, as well as national, economic, and political contexts in which ECEC services are provided - this cross-country volume is extremely relevant for fully understanding issues in the field of ECEC. This book was originally published as a special issue of Early Child Development and Care.

This book applies a number of different disciplinary and geographical perspectives to ascertain whether and how European youth identify with the EU, trust EU institutions and engage in EU issues. It investigates the factors and processes that predict the different ways in which young Europeans engage (or do not engage) with social and political issues and become active European citizens. The volume is based on results from the first two years of the Horizon 2020 CATCH-EyoU project (“Constructing Active Citizenship with European Youth: Policies, Practices, Challenges and Solutions”). It addresses different dimensions of active citizenship in the EU and different processes and contexts that explain the construction of youth active citizenship, including societal-level factors

such as policy context and media; interaction-level contexts such as school and family; and individual-level factors. The final chapter emphasizes the impact of the current historical context on the development of young Europeans’ civic identity and their understanding of the social and political reality. With contributions from a variety of disciplines including psychology, political science, communications and education, and spanning geographic contexts across Europe, this book will be of interest to researchers studying contemporary European youth and the construction of young people’s identity. This book was originally published as a special issue of the European Journal of Developmental Psychology. Chapters 1 and 5 are available Open Access at <https://www.routledge.com/products/9780367236557>.

This thesis discusses the physical and information theoretical limits of optical 3D metrology, and, based on these principal considerations, introduces a novel single-shot 3D video camera that works close to these limits. There are serious obstacles for a “perfect” 3D-camera: The author explains that it is impossible to achieve a data density better than one third of the available video pixels. Available single-shot 3D cameras yet display much lower data density, because there is one more obstacle: The object surface must be “encoded” in a non-ambiguous way, commonly by projecting sophisticated patterns. However, encoding devours space-bandwidth and reduces the output data density. The dissertation explains how this profound dilemma of 3D metrology can be solved, exploiting just two synchronized video cameras and a static projection pattern. The introduced single-shot 3D video camera, designed for macroscopic live scenes, displays an unprecedented quality and density of the 3D point cloud. The lateral resolution and depth precision are limited only by physics. Like a hologram, each movie-frame encompasses the full 3D information about the object surface and the observation perspective can be varied while watching the 3D movie.

Originally published in 1986, and bringing together essays written over a 10 year period, this volume offers a coherent and challenging interpretation of the German past. The book argues that the German Empire between 1911 and 1914 may have enjoyed greater stability and cohesion than is often assumed. It suggests that Imperial Germany's political institutions showed considerable

flexibility and capacity for growth and puts forward the idea that without WWI, or in the event of a German victory, the Empire might well have demonstrated its viability as a modern state. In that case, the origins of fascism should be sought mainly in the subsequent experiences of war, revolution and economic crisis and not so much in the Empire's so-called structural backwardness.
