Marine biology. Life first emerged in the ocean and

has spread throughout this dynamic environment. The distribution, growth and success of marine organisms is affected by the interaction of biological, chemical and physical processes operating in the ocean. You will study the interaction between the biology of marine organisms, the composition and properties of seawater and the physical processes operating in the oceans.

The word marine refers to saltwater environments, so marine biology does not cover life in lakes and rivers. A marine biologist can study anything that lives in oceans or wetlands, or in other...
