The study proposes and empirically validates an integrated model of leisure visitors' destination brand associations that can guide destination marketing and branding activities for both, the brand identity and the consumer-based brand equity (CBBE) perspective. A ten-phase empirical research design is established and data is collected from a sample of German leisure visitors to the Balearic Island of Mallorca, Spain. Structural equation modeling (SEM) provides empirical evidence of construct validity and reveals strong support for the validity of the proposed structural theory of leisure visitors' destination brand associations. Results also demonstrate that the structural model possesses excellent levels of predictive power and validity. Importantly, the model performs very well in the overall prediction of consumers' destination brand attitudes and loyalty.

This book is an introduction-level text that reviews, discusses, and integrates both theoretical and practical corporate analysis and planning. The field can be divided into five parts: (1) Information and Methodology for Financial Analysis; (2) Alternative Finance Theories and Cost of Capital; (3) Capital Budgeting and Leasing Decisions; (4) Corporate Policies and their Interrelationships; (5) Financial Planning and Forecasting. The theories used and discussed in this book can be grouped into the following classical theoretical areas of corporate finance: (1) Pre-M&M Theory, (2) M&M Theory, (3) CAPM, and (4) Option Pricing Theory (OPT). The interrelationships among these theories are carefully analyzed. Real world examples are used to enrich the learning experience; and alternative planning and forecasting models are used to show how the interdisciplinary approach can be used to make meaningful financial-management decisions. In this third edition, we have extensively updated and expanded the topics of financial analysis, planning and forecasting. New chapters were added, and some chapters combined to present a holistic view of the subject and much of the data revised and updated.

Based on a comprehensive quantitative study, Julia Sinnig shows that the impact social media influencers have on brand-related outcomes depends on the identification of consumers with social media influencers. Additionally, the cultural characteristics of countries in which consumers live play a significant role as to how consumers' identification with social media influencers impacts their purchase intentions for brands that are advertised by these influencers. Through these conceptually and empirically profound analyses, the author detects interesting implications for the management of brands in the context of social media and brand management. Especially when it comes to choosing the most suitable social media influencer for brand cooperations it is not the origin of fame that counts, but whether customers identify with the influencer in the right way.

This book emanates from the authors' doctoral dissertation research that explored African government mismanagement practices by focusing on the pilot case study of Chad in Central Africa. Two of Chad's positions that are most bothersome and disconcerting to the author are least favorable place in the world to conduct business according to the World Bank and one of twenty countries in the world where corruption is most existent as adjudged by Transparency International. Being born and raised in Chad, the author was so shocked by these statistics that his chief desire in writing this book is to propose some sort of solution that may help African countries enhance the management of public resources rather than pointing a finger of blame. A comparative investigation of the management practices during the autocratic regime of former president Hissein Habr and the democratic regime of current president Idriss Dby Itno was conducted. This book begins with an overview of previous Chadian governments, the history of corruption in Chad, and a description of mismanagement practices during the regimes of Habr and Dby as revealed through research. An overview of the mismanagement practices in Sub-Saharan African governments also illustrates the similarities between Chad and these countries. The author provides a theoretical framework used to conduct his research as well as several leadership models that he believes would be useful for African governments. The book ends with the authors' proposed customized Scholar-Practitioner-Leader (SPL) model based on ethics and TQM to enhance the management of public resource, and a discussion about the limits of his research plus recommendations for future research. The results of the study were shocking to say the least and raised questions about the viability of the Occidental democracy imposed in Africa by developed countries. Will some African countries be better off with a benevolent dictatorship rather than a democratic regime? Find more in the book.
