Elimination of Mother-to-Child HIV Transmission (EMCT) in ...

The program for the prevention of mother-to-child transmission (PMTCT) of human immunodeficiency virus (HIV) was launched in 2003 in China, but few studies have been conducted to describe the panorama of PMTCT. We investigated the rate and associated factors of mother-to-child transmission (MTCT) in China from 2004 to 2018. HIV-infected pregnant women from two areas in China between 2004 and ...

Overall, the rate of mother-to-child transmission of HIV in this cohort was very low (0.65%). The number of cases of mother-to-child transmission of HIV peaked in 1992 and subsequently declined, due in part to increased HIV testing and use of zidovudine prophylaxis . Four (33%) infected infants are presumed to have been infected in utero.

Perinatal (Mother-to-Child HIV Transmission) - Minnesota ...

Perinatal, or mother-to-child HIV transmission happens when a pregnant person living with HIV passes HIV to their baby. It can happen during pregnancy, delivery, and through breastfeeding. Frequency of Perinatal HIV Transmission Without treatment, 25 to 30% of babies born to a mother living with HIV will get HIV.
