This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future, but a rich and colorful history that has been captured in striking photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in 1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new

pictorial history.

The updated and expanded 2nd edition of *FINE MOTOR SKILLS IN CHILDREN WITH DOWN SYNDROME* continues to be a popular, practical guide to understanding fine motor skills in children with Down syndrome and helping them develop these skills from birth through early adolescence. The first edition won a Parent's Choice Award in 1999. The author, an occupational therapist who has worked extensively with children with Down syndrome, is also the parent of a teenager with Down syndrome. She offers parents and professionals dozens of easy, home- and school-based activities, illustrated with black and

white photos, which help children gradually acquire the skills they need for fine motor development. Readers learn how to incorporate work on fine motor skills into everyday activities and routines and to emphasise tasks that children can use throughout life -- play, self-help, printing, cutting with scissors, and computer use. New to this edition is a chapter on sensory processing and how the sensory system affects behaviour and learning in children with Down syndrome. Parents learn strategies that can help children handle various sensory problems so they can continue to learn daily living skills. Bruni includes new information on determining when a child is ready for 'pre-printing' activities (things a child can do to prepare for trying to print letters) and how to introduce related concepts (up & down; top & bottom; start & stop; left & right). The 2nd edition also includes more information on ways to help children learn self-help skills, such as dressing, using a fork and spoon, and becoming potty trained. This new and improved edition gives parents and professionals the expertise and confidence they need to help children build fine motor abilities and become more independent. Tar-
