Government is broke. The 2004 federal deficit is the highest in U.S. history. The states have suffered three years of record shortfalls. Cities, counties, and school districts are laying off policemen and teachers, closing schools, and cutting services. But the fiscal pain won't go away, and the bankrupt ideologies of left and right offer little guidance. The Price of Government presents a radically different approach to budgeting—one that focuses on buying results for citizens rather than cutting or adding to last year's spending programs. It advocates consolidation, competition, customer choice, and a relentless focus on results to save millions while improving public services.

This second edition demonstrates how chemistry influences the design of water treatment plants and how it should influence the design. Historically, water treatment plants have been designed from hydraulic considerations with little regard to chemical aspects. The many chemical reactions used for removal of pollutants from water simply cannot be forced to occur within current designs. This book re-examines this traditional approach in light of today's water quality and treatment. Will current water treatment processes be sufficient to meet future demands or will new processes have to be devised? Chemistry of Water Treatment assesses the chemical and physical efficacies of current processes to meet the demands of the Safe Drinking water Act, providing expert information to persons responsible for the production of potable water into the next century.

Image-Guided Cancer Therapy: A Multidisciplinary Approach provides clinicians with in-depth coverage of the growing, dynamic field of interventional oncology. Combining the knowledge of expert editors and authors into one powerhouse reference, this book looks at tumor ablation, HIFU, embolic therapies, emerging technologies, and radiation therapy throughout the body (liver, bone, breast, gynecologic and prostate cancers, to name just a few) , and includes discussion of different imaging modalities. In the words of Peter Mueller, MD, author of the book's Foreword: "... The senior authors are all world renowned experts in interventional oncology, which is another example of the high quality authorship and experience that is brought to this book. Everyone who is doing or wants to do ablation therapies and interventional oncology will face a time when they will be asked to use their expertise in less used and less investigated areas. There is nowhere else where the reader can get information on the prostate, breast, and gynecologic areas, and especially pediatrics....This book is an outstanding contribution to the literature and will become a 'must read' for all physicians who are interested in Interventional Oncology."

These reflections from the career of a prominent physician help students and the public better understand patient care through insights gained from his stories. Medical knowledge and technology are advancing faster than we can learn to apply them wisely. The pace of change threatens the humanistic aspects of patient care. The arts of listening, observing and examining, and the values of professionalism, ethics, and humor are threatened; both patient and physician are dissatisfied. It is time to restore balance in the care of patients by reinforcing the importance of these skills—and this groundbreaking book does just that. By sharing remarkable patient stories accumulated over almost six decades, Dr. Paul Griner shows how the somewhat elusive concepts intrinsic to “the art” of medicine can be better understood and applied in the day to day care of patients. Provocative questions at the end of each story challenge the reader to avoid a premature response, reflect more deeply on the question and learn how much of medicine is not black and white. Included are such compelling questions as: How do you respond to a parent who insists that her twenty-two year old daughter not be told she has leukemia?, What do you say to the mother of a nineteen year old son who begs to let him die so that he can be relieved of the agonizing complications of his aplastic anemia?, How do you advise the pregnant wife of a medical resident who wishes to defer treatment for Hodgkin's Disease, for months, until after the baby is born?, How do you account for a patient whose leukemia disappears without treatment?, How do you respond to the death of a patient from an intern's careless act? These and almost fifty other stories provide a rich learning experience for both patients and health care professionals alike. A clarion call to balance humanism and technology for the benefits of a system that is breaking apart, Dr. Griner's collection of stories is a revelation. Exploring the variety of patient problems to delineate points of learning and personal growth, *The Power of Patient Stories, Learning Moments in Medicine* is a must read for patients and health professions students.

At its heart this book is about innovation and the innovation process. On the way, it considers aesthetics, design, creativity and the creative industries, and a number of other similar topics. Much of the existing economic literature on innovation has taken a particularly technological or functional viewpoint as to what sort of new products and processes are to be considered innovations. One of

the key things this book shows is that there is a type of innovation, here labelled 'soft innovation', primarily concerned with changes in products (and perhaps processes) of an aesthetic or intellectual nature, that has largely been ignored in the study of innovation prevalent in economics. Examples of innovations that, as a result of this refocusing, are here placed at the centre of the analysis include: the writing and publishing of a new book, the writing, production, and launching of a new movie, the development and launch of a new advertising promotion, the design and production of a new range of furniture, and architectural activity in the generation of new built form designs. The realisation of the existence of soft innovation means that, not only is innovation more widespread than previously considered, but that it may also take a different form than commonly considered. Soft Innovation addresses key issues such as: \* The measurement of the rate and extent of soft innovation, \* The determinants of the rate and direction of soft innovation and its diffusion, \* The impacts of soft innovation and diffusion upon outputs, productivity, employment, firm performance, trade, and economic welfare, \* Policy, considering whether there is a rationale for government intervention in the soft innovation generation and diffusion processes, and if so what instruments can be used in such intervention? Soft Innovation breaks new ground in the study of innovation, and will be key reading for academics and researchers of Innovation, Marketing, and Design, as well as consultants, practitioners, and policy-makers concerned with the creative industries.
