Hand drawing and sketching are fundamental aspects for visual communication in the design field. Individuals can use these two techniques to improve their understanding of spatial concepts, to provide common language for translation of visual ideas and to assist with developing creative design solutions. This book provides every student with an opportunity to learn hand design drawing skills. Students are progressed from very basic drawing techniques to the drawing of complete interior perspective rooms. The step-by-step instructions, hand drawn illustrations and video demonstrations, provide effective support material for this process. In addition, creative strategies and helpful hints throughout the book encourage students to overcome typical obstacles. Creating realistic drawings in proportion depends on the ability to draw a box in perspective. Therefore, the basic theory of this book uses the box method of drawing. Furthermore, all of the objects illustrated are interior elements, furniture and accessories. Each of the three sections in the book builds upon the other. Part I, Drawing Fundamentals, focuses on techniques for learning basic line drawing skills. It covers drawing various forms and the adding of value, texture, pattern, shade and shadow. Part II, Drawing Interior Elements, demonstrates techniques for drawing furniture in one-point and two-point perspective. It also includes instruction for drawing plants, tabletop objects, accessories and window treatments. Finally, Part III, Perspective Drawing, provides detailed instructions for drawing one-point and two-point perspectives of interior spaces. This section provides students the opportunity to bring together all they have learned in previous sections and apply it to toward communicating design ideas. This edition also contains a new section on Advanced Perspective Techniques, which provides a variety of tips and techniques for creating and embellishing perspective drawings.

The twentieth century was a golden age of mapmaking, an era of cartographic boom. Maps proliferated and permeated almost every aspect of daily life, not only chronicling geography and history but also charting and conveying myriad political and social agendas. Here Tim Bryars and Tom Harper select one hundred maps from the millions printed, drawn, or otherwise constructed during the twentieth century and recount through them a narrative of the century's key events and developments. As Bryars and Harper reveal, maps make ideal narrators, and the maps in this book tell the story of the 1900s—which saw two world wars, the Great Depression, the Swinging Sixties, the Cold War, feminism, leisure, and the Internet. Several of the maps have already gained recognition for their historical significance—for example, Harry Beck's iconic London Underground map—but the majority of maps on these pages have rarely, if ever, been seen in print since they first appeared. There are maps that were printed on handkerchiefs and on the endpapers of books; maps that were used in advertising or propaganda; maps that were strictly official and those that were entirely commercial; maps that were printed by the thousand, and highly specialist maps issued in editions of just a few dozen; maps that were envisaged as permanent keepsakes of major events, and maps that were relevant for a matter of hours or days. As much a pleasure to view as it is to read, A History of the Twentieth Century in 100 Maps celebrates the visual variety of twentieth century maps and the hilarious, shocking, or poignant narratives of the individuals and institutions caught up in their production and use.

If you've ever wanted to draw or design cars, this book is for you.

Mid-Century Modern Interiors explores the history of interior design during arguably its most iconic and influential period. The 1930s to the 1960s in the United States was a key moment for interior design. It not only saw the emergence of some of interior design's most globally-important designers, it also saw the field of interior design emerge at last as a profession in its own right. Through a series of detailed case studies this book introduces the key practitioners of the period - world-renowned designers including Ray and Charles Eames, Richard Neutra, and George Nelson - and examines how they developed new approaches by applying systematic and rational principles to the creation of interior spaces. It takes us into the mind of the designer to show how they each used interior design to express their varied theoretical interests, and reveals how the principles they developed have become embodied in the way interior design is practiced today. This focus on unearthing the underlying ideas and concepts behind their designs rather than on the finished results creates a richer, more conceptual understanding of this pivotal period in modernist design his-

tory. With an extended introduction setting the case studies within the broader context of twentieth-century design and architectural history, this book provides both an introduction and an in-depth analysis for students and scholars of interior design, architecture and design history. Starting off with the artist's top winning pencil drawings from 2010 through 2012, this autobiography style book allows the reader an opportunity to not only learn the process it took to complete most of his drawings (created between 2008-2013) which are shown within these pages, but offers a personal look into who the artist is as a man. From portraits to figure drawings, David J. Vanderpool shares how simple pencil lines can be used to create masterfully crafted drawings - all while working through obstacles he would later encounter as an artist. Proving that art isn't always about who the artist is, but rather who catches his attention at that moment. Closing with several fan-favorite drawings from his other top selling books, this book offers his most completed works to date. VIEWER DISCRETION IS ADVISED: This book contains adult male nudity. NOTICE: This book is not a "how-to book" but rather as one review noted, "An Art Exhibit And Fan Book." The inside pages are not glossy.

The history, culture, and lifeways of New Netherland as researched and interpreted by Dutch and American scholars.

Best known for her culinary and domestic guides and the award-winning short story "Mrs. Washington Potts," Eliza Leslie deserves a much more prominent place in contemporary literary discussions of the nineteenth century. Her writing, known for its overtly moralistic and didactic tones—though often presented with wit and humor—also provides contemporary readers with a nuanced perspective for understanding the diversity among American women in Leslie's time. Leslie's writing serves as a commentary on gender ideals and consumerism; presents complicated constructions of racial, national, and class-based identities; and critiques literary genres such as the Gothic romance and the love letter. These criticisms are exposed through the juxtaposition of her fiction and nonfiction instructive texts, which range from lessons on literary conduct to needlework; from recipes for American and French culinary dishes to travel sketches; from songs to educational games. Demonstrating the complexity of choices available to women at the time, this volume enables readers to see how Leslie's rhetoric and audience awareness facilitated her ability to appeal to a broad swath of the nineteenth-century reading public.

Perhaps more than any other collector of his generation in the United States, Robert Lehman was

interested in acquiring early drawings. He made a great effort to add drawings to the collection of paintings, sculpture, ceramics, glass, and other objects that his father, Philip Lehman, had begun assembling. The 116 Italian drawings analyzed and discussed in this volume are among the more than 2,000 works of art from the collection now housed in the Robert Lehman Wing of The Metropolitan Museum of Art. Robert Lehman's collection demonstrates the variety of drawings produced in Italy from the fifteenth to the seventeenth century, a period when the purposes and techniques of drawings, as well as the aims and abilities of the artist who made them, became increasingly sophisticated. The volume includes an elaborate design for an equestrian monument by Antonio Pollaiuolo, a magnificent study of a bear by Leonardo da Vinci, a cartoon by Luca Signorelli, a study for a vault fresco by Taddeo Zuccaro, and many other drawings that are among the best Italian examples to have survived from that era. Most types of drawings, in a wide variety of techniques, are represented—figure studies, grand compositions, landscapes, cartoons, modelli, and even sculptors' studies. -- Metropolitan Museum of Art website.
