In Hip Hop Ukraine, we enter a world of urban music and dance competitions, hip hop parties, and recording studio culture to explore unique sites of interracial encounters among African students, African immigrants, and local populations in eastern Ukraine. Adriana N. Helbig combines ethnographic research with music, media, and policy analysis to examine how localized forms of hip hop create social and political spaces where an interracial youth culture can speak to issues of human rights and racial equality. She maps the complex trajectories of musical influence—African, Soviet, American—to show how hip hop has become a site of social protest in post-socialist society and a vehicle for social change.

Integrated River Basin Governance - Learning from International Experience is designed to help practitioners implement integrated approaches to river basin management (IRBM). It aims to help the coming generation of senior university students learn how to design IRBM and it provides current researchers and the broader water community with a resource on river basin management. Drawing on both past and present river basin and valley scale catchment management examples from around the world, the book develops an integration framework for river basin management. Grounded in the theory and literature of natural resources management and planning, the thrust of the book is to assist policy and planning, rather than extend knowledge of hydrology, biophysical modelling or aquatic ecology. Providing a classification of river basin organizations and their use, the book also covers fundamental issues related to implementation: decision-making, institutions and organizations, information management, participation and awareness, legal and economic issues, integration and coordination processes, building human capacity. Integrated River Basin Governance focuses on the social, economic, organizational and institutional arrangements of river basin management. Methods are outlined for implementing strategic and regional approaches to river basin management, noting the importance of context and other key elements which have been shown to impede success. The book includes a range of tools for river basin governance methods, derived from real life experiences in both developed and developing countries. The successes and failures of river

basin management are discussed, and lessons learned from both are presented. The ebook for this title is available to download for free on the WaterWiki.

A brave account of the social and political forces that threaten a woman's right to choose, this emotionally affecting memoir from a doctor on the front lines of the abortion debate reveals what's really at stake in the Supreme Court In America the reproductive justice debate is reaching a new pitch, with the Supreme Court weighted against women's choice and state legislatures passing bills to essentially outlaw the practice of abortion. With This Common Secret, Dr. Susan Wicklund chronicles her twenty-year career in the vanguard of the abortion war. Growing up in working-class rural Wisconsin, Susan made the painful decision to have an abortion at a young age. It was not until she became a doctor that she realized how many women shared her ordeal of an unwanted pregnancy...and how hidden this common experience remains. Now, in this raw and riveting true story, Susan and the patients she's treated share the complex, anguished, and empowering emotions that drove their own choices. Hers is a calling that means sleeping on planes and commuting between clinics in different states—and that requires her to wear a bulletproof vest and to carry a .38 caliber revolver. This Common Secret reveals the truth about the reproductive health clinics that anti-abortion activists mischaracterize as damaging and unsafe. This intimate memoir explains how social stigma and restrictive legislation can isolate women who are facing difficult personal choices—and how we as a nation can, and must, support them.

This landmark reference work is the first complete history of Australia and its relationship with, and role within, the United Nations. On 17 January 1946, when the United Nations Security Council held its inaugural session, an Australian representative, Norman Makin, presided. If all members adhered to the principles of the United Nations Charter, predicted Makin, the United Nations would become "a great power for the good of the world, bringing that freedom from fear, which is necessary before we can hope for progress and welfare in all lands". Australia and the United Nations traces how Australia committed itself to the United Nations project, from before the convening of the first United Nations Security Council until the eve of its election to a fifth term on that body. The book begins with Australian involvement with the organisation that preceded the United Nations, the League of Nations. It then analyses the role played by Australian Minister for External Affairs, HV Evatt, and his staff in framing the United Nations Charter at San Francisco in 1945. Three chapters analyse Australia's diplomacy towards the Security Council, its efforts in peacekeeping, and evolving policies and attitudes towards arms control and disarmament. Two chapters discuss Australia's engagement with the United Nations' manifold specialised agencies and the role of the broader UN family in development. Another two chapters are devoted to a study of Australia's role in areas of United Nations operation only dimly foreseen by its founders at San Francisco—decolonisation and the environment. The two final chapters examine Australia's contribution to the promotion of human rights and international law and the important role it has played seeking to improve the United Nations' performance to equip it to meet new challenges in global politics. Australia and the United Nations tells us what was done in the past, and why. It is essential reading for

anyone who wants to better understand Australia's multilateral diplomacy, and our future choices.

Data are a crucial ingredient in any successful education system, but building and sustaining a data system are challenging tasks. Many countries around the world have spent significant resources but still struggle to accomplish a functioning Education Management Information System (EMIS). On the other hand, countries that have created successful systems are harnessing the power of data to improve education outcomes. Increasingly, EMISs are moving away from using data narrowly for counting students and schools. Instead, they use data to drive system-wide innovations, accountability, professionalization, and, most important, quality and learning. This broader use of data also benefits classroom instruction and support at schools. An effective data system ensures that education cycles, from preschool to tertiary, are aligned and that the education system is monitored so it can achieve its ultimate goal—producing graduates able to successfully transition into the labor market and contribute to the overall national economy. *Data for Learning: Building a Smart Education Data System* and its forthcoming companion volume shed light on challenges in building a data system and provide actionable direction on how to navigate the complex issues associated with education data for better learning outcomes and beyond. *Data for Learning* details the key ingredients of successful data systems, including tangible examples, common pitfalls, and good practices. It is a resource for policy makers working to craft the vision and strategic road map of an EMIS, as well as a handbook to assist teams and decision makers in avoiding common mistakes. It is designed to provide the “how-to?” and to guide countries at various stages of EMIS deployment. A forthcoming companion volume will focus on digging deeper into the practical applications of education data systems by various user groups in different settings.

The aim of each volume of this series *Guides to Information Sources* is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information. The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it. The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources.
