Spinglish—the devious dialect of English used by professional spin doctors—is all around us. And the fact is, until you've mastered it, politicians and corporations (not to mention your colleagues and friends) will continue putting things over on you, and generally getting the better of you, every minute of every day—without your even knowing it. However, once you perfect the art of terminological inexactitude, you'll be the one manipulating and one-upping everyone else! And here's the beauty part: Henry Beard and Christopher Cerf, authors of the New York Times semi-bestseller *The Official Politically Correct Dictionary and Handbook*, have compiled this handy yet astonishingly comprehensive lexicon and translation guide—a fictionary, if you will—to help you do just that. If you want to succeed in business (or politics, sports, the arts, or life in general) without really lying, this is the book for you! (Your results may vary.) Spinglish includes these nifty bits of spurious verbiage and over a thousand more: aesthetic procedure – face-lift dairy nutrients – cow manure enhanced interrogation techniques – torture “For your convenience.” – “For our convenience.” hands-on mentoring – sexual relations with a junior employee incomplete success – failure rightsizing – firing people zero-tasking – doing nothing With each and every entry sourced from some of the greatest real-life language benders in the world today, you're virtually guaranteed to have the perfectly chosen tried-and-untrue term right at the tip of your forked tongue. Wish you could nimbly sidestep a question without batting an eye? Not sure how to apologize while also . . . not apologizing? Spinglish has you covered. Simply consult this convenient, shoot-from-the-lip glossary, and before you know it, you'll be telling it like it isn't, it wasn't, and it couldn't ever have been.

The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research—the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study.

Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal, and Federal levels. This primary purpose of this project is to begin the process of providing that guidance as it relates to mass care incident deployment.

Safety management and human factors disciplines are often regarded as subjective and nebulous. This perhaps stems from a variety of, sometimes disparate, activities in the realms of education, industry and research. Aviation is one of the safety-critical industries that has led the development of safety systems and human factors. However, in recent years, safety management and human factors are seen to be progressing well in the road, rail and the medical arena. Multimodal Safety Management and Human Factors is a wide-ranging compendium of contemporary approaches in the aviation, road, rail and medical domains. It brings together 28 chapters from both the academic and professional worlds that focus on applications, tools and strategies in safety management and human factors. It is a wellspring of the practical rather than the theoretical. Safety scientists, human factors industry practitioners, change management advocates, educators and students will find this book extremely relevant and challenging.

Subsequent chapters provide in-depth information about personal protective equipment and its limitations; protective actions ranging from site management and rescue through evacuation and decontamination; product control including the use of carbon monoxide detectors; responses to terrorism and terrorist groups; law enforcement activities such as SWAT operations and evidence collection; and more! A key resource for every fire, police, EMS, and industrial responder, *Hazardous Materials Incidents* is one of the few books available today that is modeled on current ways of thinking about HazMat and terrorism responses and operations.

The essays in this volume discuss racism and sexism as they affect mental health. In particular, they focus on training, diagnosis, treatment, and research, emphasizing the power relationships between individuals and groups that cause unequal access to mental health care. They offer perspectives on issues and their distinct effects on mental health: interracial adoptions, teenage motherhood, gender bias in mental health diagnosis and therapy, prisons used as substitutes for hospitals, homeless families, and increasing violence— in the home, on college campuses, and in the streets.

The author believes that studying a therapeutic process closely from its beginning to its termination is one of the best ways to observe, learn, and teach psychoanalytic concepts. This book is unusual

since it describes a man's drastic internal psychological changes over forty years. He was thirty-nine years old when he wanted to cut off his wife's head with an axe and he was hospitalized; previous to this incident he had delusions and hallucinations. He died at age eighty-two as a beloved community leader. The author provides clinical illustrations of primitive transference and counter transference manifestations. He defines "satellite states" in which an individual finds a balance between experiencing individuation and remaining dependent on the Other and "crucial juncture" experiences that are necessary to learn how to integrate self and object images and move up the developmental steps. Various concepts such as the replacement child, actualized unconscious phantasy, emotional flooding, and linking interpretation and therapeutic play are explored.

Nine years after Operations Desert Shield and Desert Storm (the Gulf War) ended in June 1991, uncertainty and questions remain about illnesses reported in a substantial percentage of the 697,000

service members who were deployed. Even though it was a short conflict with very few battle casualties or immediately recognized disease or non-battle injuries, the events of the Gulf War and the experiences of the ensuing years have made clear many potentially instructive aspects of the deployment and its hazards. Since the Gulf War, several other large deployments have also occurred, including deployments to Haiti and Somalia. Major deployments to Bosnia, Southwest Asia, and, most recently, Kosovo are ongoing as this report is written. This report draws on lessons learned from some of these deployments to consider strategies to protect the health of troops in future deployments. In the spring of 1996, Deputy Secretary of Defense John White met with leadership of the National Research Council and the Institute of Medicine to explore the prospect of an independent, proactive effort to learn from lessons of the Gulf War and to develop a strategy to better protect the health of troops in future deployments.

Patient-centered, high-quality health care relies on the well-being, health, and safety of health care clinicians. However, alarmingly high rates of clinician burnout in the United States are detrimental to the quality of care being provided, harmful to individuals in the workforce, and costly. It is important to take a systemic approach to address burnout that focuses on the structure, organization, and culture of health care. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being builds upon two groundbreaking reports from the past twenty years, *To Err Is Human: Building a Safer Health System* and *Crossing the Quality Chasm: A New Health System for the 21st Century*, which both called attention to the issues around patient safety and quality of care. This report explores the extent, consequences, and contributing factors of clinician burnout and provides a framework for a systems approach to clinician burnout and professional well-being, a research agenda to advance clinician well-being, and recommendations for the field.

Examines the operations of the credit insurance industry; its common practices and its competitive effects upon lenders, the economy and the consumer.

The SARS-CoV-2 virus, and the associated COVID-19 pandemic, is perhaps the greatest threat to life, and lifestyles, the world has known in more than a century. The scholarship included here provides critical insights into the institutional responses, communal consequences, cultural adaptations, and social politics that lie at the heart of this pandemic. This volume maps out the ways in which the pandemic has impacted (most often disproportionately) societies, the successes and failures of means used to combat the virus, and the considerations and future possibilities – both positive and negative – that lie ahead. While the pandemic has brought humanity together in some noteworthy ways, it has also laid bare many of the systemic inequalities that lie at the foundation of our global society. This volume is a significant step toward better understanding these impacts. The work presented here represents a remarkable diversity and quality of impassioned scholarship and is a timely and critical advance in knowledge related to the pandemic. This volume and its companion, *COVID-19: Volume I: Global Pandemic, Societal Responses, Ideological Solutions*, are the result of the collaboration of more than 50 of the leading social scientists from across five continents. The breadth and depth of the scholarship is matched only by the intellectual and global scope of the contributors themselves. The insights presented here have much to offer not just to an understanding of the ongoing world of COVID-19, but also to helping us (re-) build, and better shape, the world beyond.

In this pioneering textbook, a master psychoanalyst makes his innovative "field work" teaching technique available to seasoned practitioners and budding students alike. They can, figuratively, sit outside the one-way mirror to watch Dr. Volkan treat patients with neurotic, borderline, and narcissistic

personalities, from start to finish, using both modern and classical psychoanalytic techniques. Dr. Volkan not only explains what he is doing while he is doing it, but he also asks and answers the perennial questions so common to analytic work: what am I treating? what do I say? and why does it work? Fascinating and extraordinarily illuminating, *Psychoanalytic Technique Expanded* is unique in offering an intimate view of updated analytic treatment for an array of disorders. With an engaging narrative style that takes the reader into the depths of analytic work, this textbook can be effectively incorporated into psychiatry and psychology training programs as well as into advanced psychotherapy training programs and beginning technique courses for psychoanalytic candidates.

Nutrition and Sensation explores how sensations can impact nutrition. It unravels the hidden sensory universe acting to control our appetite and nutritional desires. The sensory influence on food choice is ubiquitous. Whether it is the color of soda, the viscosity of maple syrup, or the aroma of chocolate, the sensory experience fuels consumption. The book covers the impact of olfaction, gustation, retro-nasal olfaction, vision, vestibular function, hearing, and somatosensory and tactile nature on nutrition. It also discusses the use of the sensory system to treat nutritional disorders including obesity. Special attention is given to the mechanisms surrounding smell and taste and how they can influence satiety and weight. This book is a fascinating read for anyone looking for deeper understanding of the link between the sensory system and nutrition.

Healthcare leaders are facing major change in how healthcare is delivered as we move from fee-for-service payment models to pay for value. Physicians and hospitals are evolving from separate financial entities (with relationships varying from customers/workshops to competitors) to unified systems. Government policy maker, payers, and hordes of consultants advise hospitals to increase physician leadership in all parts of the system. However, few have proposed how this can be done when the gaps between hospitals and physicians are so wide. Physicians do not trust healthcare leaders, lack leadership and teamwork skills, and have little knowledge of how systems work. Some hospital leaders are working to overcome these gaps by setting up dyad leadership teams, consisting of a physician and an experienced manager/leader. The physician member of the team helps with the first gap; the nurse or other dyad partner is important to manage the other gaps. Until now, with the publication of *Dyad Clinical Leadership*, there has not been a source to help clinical dyad partners learn and understand how to work together in this emerging management model. Kathleen D. Sanford, DBA, RN, CENP, FACHE, Senior Vice President and Chief Nursing Officer at Catholic Health Initiatives (CHI), builds on CHI's success with this unique playbook for the model.
