Service firms have high overhead costs which are difficult to assign to individual services. To bring transparency to their value chain, they need costing approaches that help them find their own improvements. Markus B. Baum explores current theory and practice of value chain approaches and cost accounting to develop a costing approach with a suitable instrument for the allocation of fixed and overhead costs for a service firm. He describes the service business costing (S-BC) approach. This hybrid-costing model has a hierarchical structure in terms of consolidation and allocates cost and revenues on the lowest hierarchical level possible to ensure that all costs and income are assigned to activities from which they originated.

A revelatory assessment of how the Supreme Court under Chief Justice John Roberts is significantly influencing the nation's laws and reinterpreting the Constitution includes in-depth analysis of recent rulings to explore their less-understood debates and relevance. 50,000 first printing.
