This Fourth edition of the Focal Encyclopedia serves as the definitive reference for students and practitioners of photography worldwide, expanding on the award winning 3rd edition. In addition to Michael Peres (Editor in Chief), the editors are: Franziska Frey (Digital Photography), J. Tomas Lopez (Contemporary Issues), David Malin (Photography in Science), Mark Osterman (Process Historian), Grant Romer (History and the Evolution of Photography), Nancy M. Stuart (Major Themes and Photographers of the 20th Century), and Scott Williams (Photographic Materials and Process Essentials)

Maximum PC is the magazine that every computer fanatic, PC gamer or content creator must read. Each and every issue is packed with punishing product reviews, insightful and innovative how-to stories and the illuminating technical articles that enthusiasts crave.

With the advent of digital imaging, the era of traditional color photography is coming to an end. Yet more than 150 years after the invention of color photography, museums, archives, and personal collections are full of images to be cherished, studied, and preserved. These photographs, often made with processes and materials no longer used or easily identified, constitute an important part of the cultural and artistic heritage of the twentieth century. Today it is more important than ever

to capture the technical understanding of the processes that created these irreplaceable images. In providing an accessible overview of the history and technology of the major traditional color photographic processes, this abundantly illustrated volume promises to become the standard reference in its field. Following an introductory chapter on color photography in the nineteenth century, seven uniformly structured chapters discuss the most commercially or historically significant processes of the twentieth century--additive color screen, pigment, dye imbibition, dye coupling, dye destruction, dye diffusion, and dye mordanting and silver toning--offering readers a user-friendly guide to materials, methods of identification, and common kinds of deterioration. A final chapter presents specific guidelines for collection management, storage, and preservation. There is also a glossary of technical terms, along with appendixes presenting detailed chronologies for Kodachrome and Ektachrome transparencies, Cibachrome/Ilfochrome printing materials, and Instant films. This book will interest instructors and students in classroom settings; conservators, registrars, curators, archivists, and collection caretakers; and anyone else concerned with the long-term preservation of color photographs.

A huge revolution is emerging in the format and manufacturing process of electronic devices including displays brought on by the use of plastic substrates and printing technology. Flexible substrates enable large displays that can be freely bent, lightweight, and easily transported, as a result. In addition, the new technology has the potential of achieving various new devices such as e-paper, a new display medium, which epitomizes the advantage of hard copy paper; solar cells which are 1/10 the weight; sensors that can be completely embedded in floors and personal clothing. This report analyzes the latest trends in the technology and materials surrounding the manufacturing process of flexible electronic devices, with the above exciting breakthrough features.
