The split air conditioner is one of the most widely used type of the air conditioners. Earlier window air conditioner was used most widely, but the split air conditioner is now catching up with it. The major reasons behind the popularity of split air conditioner are its silent operation and elegant looks. There are two main parts of the split AC: the indoor unit and the outdoor unit.

It is the indoor unit that produces the cooling effect inside the room. The indoor unit of the split air conditioner is a box type housing in which all the important parts of the air conditioner are enclosed. The most common type of the indoor unit is the wall mounted type though other types like ceiling mounted and floor mounted are also used.

Split Airconditioner Control Troubleshooting Guide

A split air conditioner is also commonly known as ductless split or mini split where there is an outdoor unit and an indoor unit. The outdoor unit consists of a compressor, a fan and the condenser. This is the place where heat from the indoor is transferred from the indoor to the outdoor and is rejected to the surrounding.

SPLIT-TYPE AIR CONDITIONERS ... air conditioner and disconnect

the power plug or turn the breaker OFF. • A continued operation in the abnormal state may cause a malfunction, fire, or electric shock. In this case, consult your dealer. ... When the indoor unit is connected to the multi type outdoor unit of R32

While a split air conditioner cools only one room at a time, a multi-split air conditioner lets you cool multiple rooms at a time. This is a result of its construction: a split air conditioner consists of one compressor and one air outlet, while a multi-split air conditioner has multiple (up to five) air outlets, all connected to one compressor. The interior units can be wall-mounted, floor standing or ceiling-mounted, and are connected by refrigerant pipelines and cables to one outdoor unit.
