Swarm intelligence is the collective behavior of decentralized, self-organized systems, natural or artificial. The concept is employed in work on artificial intelligence. The expression was introduced by Gerardo Beni and Jing Wang in 1989, in the context of cellular robotic systems. SI systems consist typically of a population of simple agents or boids interacting locally with one another and with their environment. The inspiration often comes from nature, especially biological systems. The agen

It is not a book on Swarm Intelligence; it is a book on the authors algorithm - so it is of little use to people seeking to build social simulations in any other way. On the other hand it does not ask rigorous questions of the algorithm, so it is of limited use to people interested in the technique.
