83A - JIMMY THORNTON

MCB112 teaches fundamental principles of biological data analysis by example. The course is built around 12 weekly data analysis problems. These problems typically use synthetic simulated data sets from a fictitious in silico creature, the sand mouse *Mus silicum*.

Analysis of Biological Data gives you the tools to connect the skills and topics from biostatistics to everyday life. Every chapter has several biological or medical examples of key concepts, and each example is prefaced by a substantial description of the biological setting.
