The Molecules of Life is a new textbook that provides an integrated physical and biochemical foundation for undergraduate students majoring in biology or health sciences. This new generation of molecular biologists and biochemists will harness the tools and insights of physics and chemistry to exploit the emergence of genomics and systems-level information in biology, and will shape the future of medicine.

- The Biologist, April/May 2013 "The Molecules of Life is an excellent introductory text from Garland Science with an emphasis on the physical and mathematical principles underpinning structure and function of biological macromolecules...This textbook fills a conspicuous void in university-level biology curricula...As would be expected from the eminent crystallographer John Kuriyan, the book is eloquently written and progresses in a clear and logical fashion."
