Tornadoes | CDC

The tornadoes injured people in several states, and damaged homes and churches, officials said. They are part of a severe weather system moving east before the Christmas holiday. A strong cold...

A tornado is a violently rotating column of air extending from the base of a thunderstorm down to the ground. Tornadoes are capable of completely destroying well-made structures, uprooting trees, and hurling objects through the air like deadly missiles. Tornadoes can occur at any time of day or night and at any time of the year.

Tornadoes are vertical funnels of rapidly spinning air. Their winds may top 250 miles an hour and can clear a pathway a mile wide

and 50 miles long. Also known as twisters, tornadoes are born in...

A tornado is a violent rotating column of air extending from a thunderstorm to the ground. The most violent tornadoes are capable of tremendous destruction with wind speeds of up to 300 mph. They can destroy large buildings, uproot trees and hurl vehicles hundreds of yards. They can also drive straw into trees.

Knowing what to do when you see a tornado, or when you hear a tornado warning, can help protect you and your family. During a tornado, people face hazards from extremely high winds and risk being struck by flying and falling objects. After a tornado, the wreckage left behind poses additional injury risks.

Most Colorado tornadoes are weaker, and shorter-lived, compared to the violent tornadoes in the southern and central plains, but can cause great damage, and even death or injuries if you are not ...
