#### UK marine scientists begin work to deliver marine litter ...

Marine debris, also known as marine litter, is human-created waste that has deliberately or accidentally been released in a sea or ocean. Floating oceanic debris tends to accumulate at the center of gyres and on coastlines, frequently washing aground, when it is known as beach litter or tidewrack. The amount of marine litter found on UK beaches has more than doubled in the last 15 years. 4. It's estimated that 6.4 million tonnes of litter enter the sea annually. 5.

Marine litter is a global environmental problem with items of debris now contaminating habitats from the poles to the equator, from the sea surface to the deep sea. This litter has negative consequences for wildlife, for economies and on human health.
